Oct. 10, 2009 - *PRLog* -- Laser Eye Surgery in India

Laser eye surgery is a safe and effective method of correcting visual problems, often removing the constant need for glasses. Our guide to laser eye surgery aims to cover all your questions, from what the procedure for laser eye surgery involves, the risks, the benefits and the different types of laser eye surgery..

There are 2 main methods of laser eye surgery : -

1. LASIK Laser Eye Surgery
2. PRK Laser Eye Surgery..

Lasik Laser Eye Surgery

LASIK is short for laser-assisted in situ keratomileusis and is a treatment for short-sightedness, long-sightedness, and astigmatism. This procedure makes use of a laser that is controlled by a computer in order to reshape the cornea. More often than not..

Q. Why should you go through LASIK eye surgery ?
LASIK can be used to treat these eye refraction errors : -

myopia, nearsightedness, or short-sightedness. The front surface of your eye is flattened with the laser..

How is the LASIK procedure performed ?

The LASIK procedure will take around an hour to complete and can be performed on an outpatient basis. You will be awake for the entire procedure and in order to reduce discomfort and numb the pain, local anaesthetic will be applied. Your vision will be blurred throughout the procedure...

Here are the steps of the LASIK process : -

* The doctor will ask you to sit down on the reclining chair
* In order to numb the area and reduce discomfort, anaesthetic drops will be applied on your eyes
* Your eyes will be cleaned with an antibacterial wash
* In order to keep your eyes open throughout the procedure, a special instrument will be used so that the eyelids are held in place...

Q. What happens after the LASIK surgery ?

Right after the LASIK surgery, your eyes may feel itchy, watery, and blurry. In order to alleviate any discomfort, the doctor will prescribe certain medications or eye drops. In order to aid in the healing process, you will be required to wear eye patches while you sleep at night. ...

Q. What are the risks of the LASIK treatment ?
Here are the risks that you have to take when you go through the LASIK treatment : -

flap problems : – complications can arise when the flap from the front of your eye is folded back during the surgery. Some of the complications may include swelling, too much tearing, and infection. Moreover, the outer tissue layer of the cornea could also grow in an abnormal way.....

Photorefractive Keratectomy - PRK laser eye surgery

Photorefractive Keratectomy can be abbreviated as PRK. This was the first method of laser eye surgery which was used to treat low refractive errors. It is a suitable surgery for those with thin corneas...

Q. What are the advantages and disadvantages of PRK compared to LASIK ?

LASIK patients experience lesser discomfort and they also get better vision faster than PRK. The improvement in PRK is slower and gradual. Surgeons usually choose PRK for patients who have larger pupils and thinner corneas. ..

Q. What happens after the PRK surgery ?

You should always keep in mind the doctor’s advice after every surgery. You should rest amply, take your prescription medications diligently, and contact your doctor if you encounter any problems. Your eyes are just as vulnerable after the surgery compared to the surgery itself so you should take care after the procedure. ...
