

ABC Office Announces Addition of Pendulum Time and Attendance Payroll System.

By Kelly Bingham / ABC Office

Dated: Nov 03, 2006

ABC Office is proud to feature software and equipment by Acroprint, an innovator in payroll and timekeeping.

KAYSVILLE, Utah, November 2006 – ABC Office, a leading online distributor of office and payroll equipment, is pleased to announce the addition of the Pendulum Time and Attendance software to their line of professional time clocks and payroll systems. The Pendulum system is a member of the Acroprint family of high-tech time clocks and labor management software. ABC Office is offering this equipment at <http://www.abcoffice.com/pendulum.htm>. Their entire line of time clocks can be found at <http://www.abcoffice.com/time-clock-software.htm>.

The Pendulum Time and Attendance unit is an automated payroll system that includes software that tracks an infinite number of employees from multiple clock in/out terminals. It eliminates needing to manually calculate paper time cards since it auto-tallies hours worked while tracking vacation, sick, overtime and FMLA hours on a weekly, bi-weekly, semi-monthly or monthly basis. Electronic timecards can be approved via email, and payroll data can be exported to other popular payroll software.

The addition of the Pendulum Time and Attendance software brings the quality of Acroprint products to ABC Office's time clock and payroll management line. Acroprint has been an industry innovator and leader in the design and manufacturing of time clocks and time keeping software for over 30 years. They are renowned for their high performance biometric time clocks as well as traditional punch card clocks. The company was founded in 1969 and is headquartered in Raleigh, North Carolina.

Time clocks have been a popular tool for companies to record employee labor hours since Willard Bundy designed the first punch card time clock in 1888. Time clocks are more cost effective than the "honor system" when employees manually write in their time worked. Time clocks are available in designs varying from traditional punch card time clocks to digital ID biometric clocks that scan finger or handprints.
