

Domains at Retail Cuts I.T. Overhead for Dedicated Server Customers

By Domains at Retail

Dated: Mar 20, 2007

Customers visiting Domains at Retail's web site will value the new Assisted Services offering of expert support and great value in their dedicated server purchases.

Scottsdale, AZ – March 20, 2007 – Domains at Retail, is expanding options for its dedicated server customers by adding an Assisted Service Plan – a professional solution without the traditional costs.

Domains at Retail's technical support will address needed patches, backups, monitoring and vulnerability assessments.

"An important notion for companies wanting a dedicated servers is the daunting task of server maintenance," says Michael Kralj. "The Assisted Services plan for Dedicated Servers shifts the role of IT server maintenance to us."

Customers can get the power of a dedicated server without having to perform all of the administrative tasks associated with an unmanaged account such as server startup, patching and anti-virus protection. Add-on services, with the purchase of a service contract, include security scans, backup and recovery, monitoring and escalation management, at no additional fee. Custom engineering options are also available, billed at a flat hourly rate.

The plan can be added to qualified dedicated hosting accounts during the purchase process. While users are provided with a basic startup environment, Domains at Retail can also assist customers who have special needs. As with all dedicated servers accounts, customers can choose from a wide range of options including operating systems, RAM, hard drives, processors and firewalls. In addition, as with all Domains at Retail services, the plan is backed by Domains at Retail's round the clock customer support.
