

Live Web Conferencing Systems May Become the Medium of Choice for School Teachers

By Jeffrey Sloe / Live Web Conferencing

Dated: Mar 28, 2007

According to some live web conferencing system master distributors, live web conferencing may become a tool of choice for some school teachers

CLEVELAND, OH (March 28, 2007) A master distributor for VereConference, a live web conferencing system, announced today that VereConference is going to be the live web conferencing system of choice when it comes to tutoring children. This announcement comes on the heels of a post on the VereConference master distributor live web conferencing system forum.

The announcement, by SEO expert Butch Hamilton, stated, "...the web conference room as the best new innovative way to teach." He goes on to say that when tutoring the children of today it is important to "keep them in their element", which is technology, and the computer. Children learn more when they are in a place that they like. Being taught within a live web conferencing room could be the place of choice.

Mr. Hamilton goes on to say, "Think about the possibilities of teachers being able to teach right from the comfort of their homes or offices to students assembled at their homes. Imagine the receptivity to learning." He says that the use of a live web conferencing system would be a vehicle that allows the child to become receptive to wanting to learn. That, he says, is a big paradigm shift.

It's possible that until the parents see their child participating and interacting in the live web conferencing room that they may not be as receptive to the idea as the child. Jeffrey Sloe, a live web conferencing system master distributor for VereConference, says that "once the parents enter the room and attends an online web conference, they may be a little apprehensive towards moving to this type of medium for teaching."

Sloe said until his wife, a school teacher, attended one of his live web conferencing trainings, she was skeptical about the quality of training, not to mention the ease of use of the web conferencing room. Mrs. Sloe has now become a believer in the live web conferencing system as a viable means of educating, training, and communicating.

As technology improves there may be more and more teachers looking to move towards a live web conferencing system as a means to teach their students. Students may also enjoy the move, because most kids enjoy being in their own elements.
