

Ahsay announces Windows Vista and MS Exchange Server2007 Compatibility for its Offsite Backup Server

By Ahsay Online Backup Software

Dated: Apr 02, 2007

Ahsay continues to innovate on the multi-platform data backup solution with compatibility of Vista & MS Exchange Server 2007 to help Backup Service Providers and SMBs secure their data under the most advanced operating system and database.

HONG KONG, 3 April 2007 - Ahsay, a pioneer in developing online backup software since 1990s, announced a new version of Ahsay Offsite Backup Server (AhsayOBS) that supports the recently launched Microsoft Vista and Exchange Server 2007. AhsayOBS v5.2 is the ONLY well-proven solution on the market that is compatible with Windows Vista clients and supports full database-level backup and restore for MS Exchange Server 2007.

By closely attending to the needs of their 1,000+ premier partners, Ahsay continues to innovate on a multi-platform data backup solution that fuels the core engine of the booming data backup industry worldwide. "Businesses are craved to use the most advanced OS and database – Windows Vista and Exchange Server 2007", says Scherring Chong, I.T. Director at Ahsay. "Protecting the critical data and email records is properly the main objective of business continuity". As a Microsoft Certified Partner, Ahsay offers the Trust-You-Need in safeguarding the critical data and makes everything as a peace of mind.

Ahsay has developed specialized agents for all commonly used databases to meet the requirements for Business Continuity Planning today. As more and more incidents surface in forums and blog sites about unreadable / lost tapes and error – prone manual backups from giant organizations, traditional businesses are becoming aware of the vulnerabilities and the need for a reliable and automated offsite backup system.

Ahsay Offsite Backup Server v5.2 features include:

- ? Multi-platform – Windows, Linux, Mac, UNIX (Solaris, AIX, HP-UX, FreeBSD) and ALL other platforms supporting Java 2 SDK 1.4.2 Standard Edition
- ? Back up commonly used databases – MS Exchange Server (both Database-level and Brick-level backup for Exchange 2003), MS SQL Server, MySQL Server, Oracle, Lotus / Domino, etc.
- ? OEM branding – Customize software interface, logos and information
- ? Security – Data compressed and 128-bit encrypted before transmitting to the backup server
- ? Multi-Lingual – currently supporting 21 languages
- ? Backup Opened Files (Volume Shadow Copy Service)
- ? Automated backup
- ? Point-in-time data restore

More information about the new release is available at the company's website <http://www.ahsay.com>
