

Sweat-Stop stops sweating! Bye bye Mr. Sweat!

Sweat-Stop was developed for people who suffer from hyperhidrosis or people who just sweat heavily.

May 31, 2007 - [PRLog](#) -- Due to a new effective compound the antiperspirant Sweat-Stop restrains sweating on any part of the body. Thereby, it is mild to the skin and does not lose any effectiveness. One application every second day prevents displeasing transpiration and can considerably increase quality of life. The product was developed for persons with moderate up to strong perspiration and for persons suffering from hyperhidrosis.

Sweating is completely normal and is an essential body-procedure. The human body is equipped with more than 3 million sweat glands. Perspiration is controlled by our vegetative nervous system. Through constant moisturizing, the skin is protected of getting demure and fissured. On top of that, sweating regulates the temperature of the body. Due to moisture evaporating on the skin, a cooling effect takes place. On warm days and through strong physical effort our bodies react with excessive sweating. For some individuals this body-system works on a higher level than required. In this case sweating is far more intense than would be necessary to keep the body temperature constant. This disorder is called hyperhidrosis.

The product was developed in a German laboratory and is sold online on <http://www.sweat-stop.com>. More than thousand clients already rely on Sweat-Stop.

Novel is the added moisturizing supplement cream and the adjustment of the solutions pH-value. Therewith, a long-lasting protection against sweating is combined with a gentle care of the skin.

The product was dermatologically tested by laboratory Dr. Voss and was adjudged as being very good compatible with skin. The supplier offers a 30 days money back warranty. Thus, the customer takes no risk.

With two different product intensities in the assortment, Sweat-Stop offers a solution for persons with moderate as well as strong transpiration.
