

iGames Launches First Lease Program for Game Center Industry

By iGames

Dated: Jun 12, 2007

Leading game center organization announces the first game center equipment lease program to empower its over 500 member centers.

iGames, the world's leading game center organization, today announced the launch of iGames System Solutions, the first lease program designed with the game center industry in mind, offering its ever-growing global membership a turn-key solution to the initial start-up or refurbish cost of purchasing new computers.

After much partner coordination, iGames Systems Leasing, iSL, is a Web-based B2B building and leasing program which allows game center owners to select from several different packages depending on their size and particular needs, from the smallest to the largest center.

Unique packages include: Gaming Den: 10 systems, Arena: 20 Systems, Stadium: 50 Systems, Coliseum: 100 Systems. Centers will also be able to choose from 3 different levels of performance like the Essential, Competitive and Professional configurations.

Partners for iGames System Solutions comprise a veritable who's-who of gaming computer hardware providers. There are CPU's from Intel, GPU's from NVIDIA, graphic cards from BFG Tech., hard drives from Western Digital, cases from Antec, motherboards from Abit, and memory from Patriot Memory.

But no matter which particular package a game center owner chooses, all systems are configured for peak game center performance. These considerations include power consumption, heat generation, and high-performance Intel CPU's and NVIDIA GPU's to handle the most demanding of today's games.

"iGames has always had top companies that offer special deals for game centers" said Jeff Leggett, Director, Business Development of iGames. "However, this program combines all our partner's efforts under one simple program. iSL not only shows iGames' support for the game center industry, it shows our partner's support as well."
