

KaDonk announces the latest release of its LiveProject FREE Project Viewer 2.2.

By KaDonk

Dated: Jan 02, 2008

KaDonk announces the release of the latest version of LiveProject FREE Project Viewer for viewing Microsoft Project® plans (.mpp files). KaDonk introduces a list of powerful new features in LiveProject FREE Project Viewer 2.2.

LiveProject **FREE** Project Viewer is a stand-alone desktop application for opening/viewing Microsoft Project® files (.mpp). It is fully functional and has no expiration date. LiveProject is stable and robust. It is a high-quality Project Viewer specifically designed for the end user's ease of use. New users will have a minimum learning curve and managers will find unique value in sharing project plans that their teams can view and understand at a glance. LiveProject **FREE** Project Viewer has been installed in thousands of companies worldwide.

With the release of LiveProject **FREE** Project Viewer Version 2.2, KaDonk continues to add value to what quickly is becoming the most popular **FREE** viewer on the market today:

- Export to Comma-Separated-Values files. Users can now select tasks and quickly export them with selected columns to CSV files. Export includes Tasks, Resources and Task History (when using LiveProject Professional).
- Export to Excel (Beta). LiveProject can export any tasks to Excel spreadsheets. Exports are placed in separate sheets within Excel and are automatically given a name. Subsequent exports will override old data, but keep the same named range. This allows users to export to existing Excel sheets with existing formulas or pivot tables.
- Export to PowerPoint (Beta). This powerful new feature exports selected tasks and resources to PowerPoint templates. Each task and/or resource can be exported to its own slide. This allows for creating management presentations directly from project files with the click of a button. PowerPoint templates are user configurable and can include any project field.
- User definable alarms (Beta). With alarms, users can set up "triggers" on a project that can cause the viewer to automatically highlight tasks, play a sound or show a notification. For example, tasks that are going over budget may be highlighted in red and tasks that are moved forward may be highlighted yellow. This function is extremely powerful and completely user configurable.
