Dated: Feb 03, 2008

As an IM monitoring and management tool, Colasoft IM Monitor performs real-time monitoring, message archiving, advanced searching, and customized report generating, providing both companies and families easy IM management solution.

As an IM monitoring and management tool, Colasoft IM Monitor performs real-time monitoring, message archiving, advanced searching, and customized report generating, providing both companies and families easy IM management solution.

Colasoft IM Monitor supports 4 most popular instant messengers including MSN, ICQ, AOL and Yahoo Messenger. Based on Browser/Server architecture, it allows you to monitor IM activities of the entire network from any remote computer. With its advanced searching ability, you can filter the messages by keywords, users, time or combinations.

What makes Colasoft IM Monitor stands out from other IM Monitors is its ability to generate customized reports on demand and in intuitive graphs, letting you know to general trend and statistics of a specified period. In addition, you can also get a scheduled report in your email box. Colasoft IM Monitor supports two levels of access authority and multiple system users. It is easy to install, no need to be installed on each client.

For Enterprise Users

Colasoft IM Monitor keeps you company compliant with the laws and regulations regarding instant messaging, protect your secrete information from leakage by insiders, reduces non-business chatting and improve employee productivity, and archives chatting information for future reference.

For Family Users

Colasoft IM Monitor enables you to be aware of whom your children or partner most often communicate with and what they are recently talking about, helping you keep your children safe from internet dangers and get better understanding of you partner.
