

Elettronica selects EONIC SR-5124 for Tactical ELINT System for Major European Defense Customer

By EONIC BV

Dated: Feb 19, 2008

The SR-5124 was selected after a thorough comparison with other acquisition and recording systems on the market. Earlier, EONIC announced it's SR-5124 Multi-Channel Signals Acquisition System had been selected by the German MOD and the US-Navy

EONIC B.V. today announced that its SR-5124 Multi-Channel Signals Acquisition System has been selected by Elettronica to upgrade the ELT Tactical ELINT System. The Tactical ELINT System is a highly sophisticated mobile search, direction finding, localization, and analysis system for signals in the frequency range 0.1 to 40 GHz. The upgraded systems will be supplied to a European government for the acquisition, recording and analysis of complex modern emitters.

Technology selection is critical when upgrading one of the most sophisticated Tactical ELINT Systems in the world. EONIC's SR-5124 combines the latest technology, a superior user interface and exceptional functionality into the best performing signals acquisition available today.

The SR-5124 was selected after a thorough comparison with other acquisition and recording systems on the market. The intuitive user interface, real-time analysis capability, compatibility with MARTES and latest generation hardware offers an all-in-one system representing best value.

Earlier, EONIC announced it's SR-5124 Converged Multi-Channel Signals Acquisition System had been selected by the German Ministry of Defense and the US-Navy. The SR-5124 offers exceptional dynamic range, simultaneous recording of multiple channels, integrated FISINT/COMINT/ELINT capability, playback while record and compatibility with MARTES, MIDAS and other signal analysis tools. It enables a combination of video, radio, satcom and radar signals to be detected, monitored, recorded and analyzed simultaneously on a single system.
