About Zoom® Whitening

The Zoom!® whitening procedure cuts through stains on teeth caused by drinking coffee, tea, cola and red wine or smoking.

If performed as an in-office procedure, the procedure begins with a short preparation to cover the lips and gums, leaving only the teeth exposed, according to (<http://www.zoomnow.com/about.php>) the Zoom!® official Web site.

A dentist or other Zoom!® clinician then applies the proprietary Zoom!® whitening gel, designed specifically to be used with the Zoom!® light. This low-heat light penetrates the teeth and works with the hydrogen peroxide contained in the gel. The gel attaches itself to stained molecules on the teeth, breaks up the molecules and reduces the discoloration by allowing oxygen to enter the tooth enamel.

During this time the patient can relax, watch TV or listen to music. The gel is applied for three 15-minute sessions, for a total treatment time of 45 minutes. After each session, the patient undergoes a five-minute fluoride treatment. At the end of the process, the patient goes home with their whiter, brighter Zoom!® smile.

Zoom!® also is available as an at-home teeth whitening product, known as the Zoom!® Take-Home Whitening System. It functions similarly to the in-office procedure, but is conducted over the course of three nights, according to www.dentalfind.com.
