

Xila Hosting is proud to announce it's full line of xPower dedicated servers.

By Xila Hosting

Dated: Mar 02, 2008

Xila, the leader in streaming video hosting has expanded it's offering by adding a full line of dedicated servers. As the leader in ffmpeg powered video hosting; Xila now makes it easier than ever for new and existing subscribers to go dedicated.

Known for it's exceptional valued shared hosting, Xila Hosting hopes to capture a previously unreachable customer base with it's new line of xPower dedicated servers. xPower dedicated servers start at only \$85 per month and give customers the choice of Intel or AMD single and dual core processors with an abundance of RAM and hard disk space. With the release of it's revolutionary Streamer X3 service in 2007, Xila Hosting has gained a broad customer base looking for the best solutions for their resource hungry video site. With popular video scripts such as PHPMotion and ClipShare leading the way the new xPower dedicated servers are the next perfect solution offering unmetered bandwidth free with most configurations. Xila Hosting now offers more solutions for streaming video hosting than all of it's closest competitors, including XilaPlus Shared Hosting, XilaPlus Shared Hosting with bundled Streamer X3 service, Streamer X3 Stand Alone, and now xPower Dedicated servers. As an additional bonus all xPower dedicated servers come pre-installed with ffmpeg, mencoder, flv2tool; tools required for converting video.

Like Xila Hosting's shared hosting services, xPower dedicated servers support popular scripts such as PHPMotion, ClipShare, vShare, and Altrasoft Video Enterprise.
