

With The New Mapeer Website You Can Edit The World Together

By Shojiro Satoh

Dated: Mar 12, 2008

KingFish communication launches interactive social map for the web.

Tokyo, Japan -- Mapeer is a social map service powered by Google Maps application programming interface (API). The web site allows users to share and communicate ideas with each other on a global stage. You can share your specific city knowledge, information on outdoor attractions, tourist information and many other topics. Users can compile the position, the area, and the route jointly and release the information online. Images, videos and comments can be posted to enhance the directions, destination or overall information. There is a function to measure the distances or area of a map. A user can also import marker information on previously created maps to easily publish new online maps.

All regional information which is hosted on Mapeer can be easily unified. Furthermore, it is possible to edit the content with a group of users and to share the regional information. Mapeer plans to keep offering new functions to enhance the user's convenience and experience. Future updates include: A mobile Mapeer version, trackbacks, functions which take in the feed information of other web sites, GPS functions, and better communication functions among users.

If you would like to find more information about this new social mapping site, please go to:
