

Computex Construction Technologies Building Newest Enterprise Data Center Facility for Dataside.

Computex Construction Technologies, the leading critical facilities provider for the technology industry, announced it will begin construction on the seventh and newest enterprise data center facility for its client Dataside.

April 2, 2008 - [PRLog](#) -- The facility will become the fifth data center located in the Dallas-Fort Worth Metroplex area and one of seven in the U.S. In a recent national study by The Boyd Co., Dallas ranks 35th in the nation as the most cost-effective and operationally secure location for data centers due to its real estate market, insulation from floods and hurricanes, its airport, technical labor force, and its short distance from either coast.

President of Computex Ron Pruitt said, "We are pleased that Dataside has chosen Computex to construct this facility. Their confidence in our abilities continues our long term relationship. We have built all of the Dataside facilities now in operation, and this project will be the latest in our efforts to provide them with first class data centers."

President and CEO of Dataside Jim deVenny said, "The current demand for dependable top-tier data center space is at an all time high. Our successes stem from the ability of Dataside to consistently deliver reliable large-scale, customizable data center solutions to a discerning clientele." Mr. deVenny added, "We cannot be more pleased with our recent growth rate, and this latest data center deal merely illustrates our continued commitment to remain at the forefront in addressing the expanding needs in this marketplace."

The new data center, dubbed Dallas IV, will be housed within the world-famous Infomart building, just North of Downtown Dallas, along with three other sister Dataside facilities. The U.S. Government requires most companies across various industries to digitize their data and Computex offers integrated design, mechanical, electrical and physically secure solutions for Page Two-Computex Construction Technologies Building Newest Enterprise Data Center Facility for Dataside-(November 20, 2007)

managing expanding sources of data and helping companies maintain compliance, access and safety of their integral and critical information systems.

About Computex Construction Technologies, Inc.

Computex Construction Technologies (CCT) is a leading provider of construction services with a focus on technically demanding applications. CCT specializes in solutions for the support of technology operations and has provided critical facilities for the data processing, telecommunications and broadcast industries since 1987. Their expertise in delivering quality power, environmental and site construction assures customers of a secure and reliable operations environment. The firm's experience and knowledge utilized in the design and construction of technology facilities provides customers with a coordinated installation, thereby eliminating the inherent problems of integrating electrical, mechanical and architectural construction into a functioning system.
