

University of Phoenix Students Discover Math Lifesaver

With over 50% of college students failing algebra, returning students face a daunting hurdle. Instant Math Help from Learn Without Limits is not only affordable but lets every returning student pass college algebra and finish their degree.

April 17, 2008 - [PRLog](#) -- University of Phoenix students have been flocking to the instant math services of Learn Without Limits. Glynn Willett, CEO of Learn Without Limits, explains, "It's not just University of Phoenix students; there has been an explosion of returning students, students over 30 years old, who are now going back to college. These students are many years away from their last math class and all have to take college algebra."

Returning students have unique needs—they are usually working full-time, have families, and are very cost conscious. Online colleges cater to these needs but don't have the support services that students require when it comes to trying to understand college algebra.

Traditional tutoring by meeting with a tutor at a certain time doesn't work with a returning student's busy schedule. Other online tutoring solutions are simply too expensive for most returning students. Instant Math Help's cost at only \$14 for 50 minutes is not only affordable but also available when the student needs the service the most—while solving problems.

Jessica, 24, is typical of many returning students when she said, "I've been out of school for seven years and I couldn't clearly remember how to do math problems. I reviewed at least 10 different tutoring services but fell in love with Learn Without Limits because I can see the answer being drawn step-by-step. It also didn't hurt that Learn Without Limits' price is less than half of what many of their competitors charge. Learn Without Limits is great!"

Over 50% of the students taking college algebra fail and the percentage is much higher for returning students. The confidence gained by students finally able to pass algebra is reflected in the many testimonials that describe Learn Without Limits as a "lifesaver".

Instant Math Help is an on-demand online tutoring system that helps returning students with their questions when the student is solving problems. What's best however is that a student can ask as many questions as needed to grasp a math concept. No matter what time or day a student has free to work on their algebra homework, Instant Math Help is available—the perfect solution for the returning student.
