

CIC Access Provides New Biometric Access Control Systems

By SEOP

Dated: May 19, 2008

Biometric access control is the latest technology that prevents unauthorized people from entering specific areas. CIC Access provides biometric access control systems. These systems are necessary to prevent possible acts of terrorism or robbery.

Amityville, NY – Biometric access control is a cutting-edge technology used for maintaining security. It replaces traditional systems of locks and access cards. Biometric access control permits or denies entry based on the unique features of the person trying to get in. The most commonly used feature is the fingerprint.

In the past, keys or access cards could be lost, or mistakenly given to unauthorized personnel. Biometric access control makes it impossible for unauthorized individuals to gain entry. Only those with the right biometrics match can go inside. Control is specific, and can be easily set up and maintained.

In this age of crime and terrorism it is imperative that companies make every effort to protect the safety of their employees. [Biometric access control makes this possible.](http://www.cicaccess.com) A biometric imprint is unique to each individual and cannot be faked or tricked. Many forward-thinking companies are already using this new technology. Companies that want to learn more about biometric systems should visit CICAccess.com, or call them at (631) 842-9400.

About CICAccess.com: CIC Access is a pioneer in the biometric access control industry. They have been providing various access systems since 1961. As leaders in the biometrics industry, they have developed and provided some of the most highly technical systems available today. Their systems are in use at some of the largest schools, hospitals, and corporations in the world.
