

Coal to Liquid Fuels - The Next Global Investment Megatrend!

By Hawkins & Doyle Inc.

Dated: May 27, 2008

We at Hawkins & Doyle believe that if you wake up early in the morning, enjoy a good cup of coffee, take a moment to smell the flowers and be thankful for your blessings, you too can succeed in this game called investing.

The secret to investing is really very simple. As simple as being told to, "BUY LOW AND SELL HIGH". We at Hawkins & Doyle believe that if you wake up early in the morning, enjoy a good cup of coffee, take a moment to smell the flowers and be thankful for your blessings, you too can succeed in this game called investing. Because quite simply, if you rub the grime away from your eyes, the mega-trends that have made average people millionaires are easy to pick- you just need to have the desire to change your life and to be willing to take a little calculated risk to achieve the financial goals you only have dreamt about until now!

Did you notice in the late '80's that your favorite little bank where the Teller knew you by your first name was bought out by a larger bank, which was soon bought out by another larger bank and the regional bank wars resulted in there only being 3 or 4 mega-banks in any major city. People who spotted this trend made huge returns!

How about the technology boom? Did you ever stop and ask, "should I buy some of that Microsoft or Intel - they go in every computer?"! Well, you know that a mere \$10,000 invested into Microsoft in 1986 would be worth \$4.7 million dollars today. \$10k invested a decade ago into Intel would be worth almost \$500,000 today!

Then there was the dot-com boom. Then - the mobile phone boom. The boom in China in the early 2000's that saw companies on the Hong Kong exchange, like Petro China (0857.hk) grow from 8 to 14 (up 75%) and China Life soar 217%, Zijin Marketing jump 250%.

Do you ever think, "Why do I always miss the mega-trends, they seem so obvious?"

Isn't it time to stop being a spectator and become a Profit Taker?

The alarming fact is-the world has less than a 40-year supply of oil. Energy demands from China and India, 2 of the fastest growing world economies, is threatening global security and our uninterrupted fuel supplies.

Coal to liquid fuel conversion is the most logical solution to the world's energy shortage!

CTL is going to be the next megatrend!

The facts are this:

- CTL is a proven 80-year old technology that is currently providing over 30% of fuel needs in S. Africa. Officials have said that within the next 15 years CTL facilities will 100% of South Africa's energy needs.
- There is a 150 year supply of coal compared to a 40-year supply of oil (www.bp.com)
- CTL fuel is 2/3rds less expensive and is environmentally friendly, being both biodegradable and burning

80% cleaner than petroleum fuels.

- CTL uses the same distribution system as gasoline and requires no retrofitting of automobiles. This fact alone saves billions of dollars when compared to other bio-fuels.
- The United States' Energy Information Administration Annual Energy Outlook for 2008 confirms the US commitment to CTL stating that 'coal use for CTL production will be the 2nd largest user of coal by 2030.'(see attached)
- There are as many as 27 CTL facilities being built around the world in countries including China, India, US, Japan, Australia, New Zealand, Malaysia, S. Africa and many others.
- CTL will soon be one of the world's major fuel sources. Additron Technologies unique propriety formula produces virtually no CO2 emissions. It is the cleanest most environmentally friendly process. Additron Tech will soon be the industry leader in alternative fuels.
- www.newsweek.com/id/44188: Governments are investing billions into CTL and related technologies; The result is an investment BOOM!
- www.greencarcongress.com/2006/06/shenhua_group_h.html : Shenhua Group Has 8 CTL Projects in pipeline; Targeting 30m tons per year by 2020
- www.world-ctl2008.com/q_a.html : The First World Coal to Liquid Fuel Fair is to be held on the 3 -4 April 2008. This is a conference endorsed and supported by the world's leading energy forums and organizations.
- www.nma.org : the National Mining Association in the USA have released an article outlining and endorsing CTL as the answer to the global energy crisis. Go to Press Release page and in search engine type in, "CTL"
- www.eia.doe.gov/oiaf/aeo/production.html : The report clearly states that the United States is committed on a large scale to make use of coal to liquid fuel, make sure you take particular note that by 2025 CTL technology will be the second largest consumer of coal in the world after electricity (AEO2008 ref case)
- www.ultracleanfuels.com : A collection of articles about CTL worth checking out.
- www.sasol.com : SASOL is currently the world's leading CTL producer.
- www.flightglobal.com/articles/2008/02/25/221766/coal-jet-fuel-of-the-future.html : Synthetic fuel is less expensive, less pollutant and has the USA and UK military very interested.
