

Technology Stock Advisor News Alert: Three New Companies Added to Technology Stock Watch List

By The Private Capital Market, Inc

Dated: Jun 12, 2008

Technology Stock Advisor Adds: · (CMTL) Comtech Telecommunications Corp. · (RHT) Red Hat Inc. · (CYMI) Cymer Inc.

Raleigh, N.C. The Technology Stock Advisor, an online newsletter investment advisor with a patented stock selection methodology for picking technology stocks, added three new stocks to the newsletter's watch list today.

"We find these stocks by conducting an investigation each day of the universe of stocks that fit our initial screening criteria, said Thomas Vass, the registered investment advisor who manages the newsletter.

"We have some reasons to believe that these companies are important members of the nine high technology value chains in America," he added. Almost all of the technological innovation in new products is generated as a result of transactions between the member companies of the value chains.

"Our watch list stocks are good companies in the right high tech industrial value chains in America," said Vass. "They meet some, but not all, of the rigorous evaluation criteria established by the patent for selecting a stock for investment," he explained.

Companies placed in the Technology Stock Advisor Watch List are monitored on a daily basis for news and financial updates to determine if the screening criteria for entering the next level of monitoring will be met at a future time.

Currently, there are about 400 technology companies being monitored in the TSA Watch List. When a company on the watch list meets all of the screening criteria, they move from the watch list into one of the three active stock lists, A, B, or C, as defined by the quality rating provided Standard & Poor's, the world's foremost provider of independent credit ratings, indices, risk evaluation, investment research and data.

"We have a total of about 150 companies that are in the active stock lists," said Vass. "The patented process used by the Technology Stock Advisor sets buy limits and sell limits on prices, so even if a company is on the active list, its current stock price may not be in the buy range, even if all the other screening criteria are met," he explained.

The Technology Stock Advisor Newsletter is a related business subsidiary of Vass' traditional investment management practice where he manages the wealth accounts of investors and retirement accounts.

About Comtech Telecommunications Corp. 68 South Service Road, Suite 230, Melville, NY 11747. CMTL engages in the design, development, production, and marketing of products, systems, and services for communications solutions in the United States and internationally. It operates in three segments: Telecommunications Transmission, Mobile Data Communications, and RF Microwave Amplifiers. <http://www.comtechtel.com>

About Red Hat 1801 Varsity Drive Raleigh, NC 27606. RHT and its subsidiaries, provides open source

software solutions to enterprises. Its solutions include Appliance Operating System comprising virtual appliance development kit for enabling independent software vendors to configure the operating system, middleware, and applications; Cloud Computing, a Web-scale virtual computing environment to develop and host applications; Datacenter, a secure data center platform; Database Availability, a platform enabling existing databases to deliver the reliability of a conventional clustered database; and Red Hat Enterprise MRG, which provides messaging that is faster and implements AMQP, an open messaging standard for interoperability. <http://www.redhat.com>

About Cymer 17075 Thornmint CourtSan Diego, CA 92127. Cymer, Inc. engages in the development, manufacture, and marketing of excimer light sources for manufacturers of photolithography tools in the semiconductor equipment industry. It offers field support products customized to support chipmaker customers, used in their advanced wafer patterning production processes. The company also provides deep ultraviolet light sources to lithography tool manufacturer customers, who integrate the light source into their wafer steppers and scanners, which they then provide to chipmakers. <http://www.cymer.com>

About The Technology Stock Advisor www.technologystockadvisor.com The Technology Stock Advisor is an online weekly newsletter that covers the high technology industrial clusters in America based upon a patented method for investigating stocks in technology industrial clusters. The newsletter provides stock advice, insights and market commentary on trends in technological innovation in America. The patent for selecting high technology stocks held by Technology Stock Advisor is based upon the theoretical insights of Wassily Leontief regarding how certain technological industrial sectors trade with each other. The methodology for deriving the nine high technology clusters was pioneered by Professor Ed Feser, of the University of Illinois.
