

Browser Shell - a secure web based ssh client.

By browsershell.com

Dated: Jun 15, 2008

Browser Shell is a 100% secure low cost web based ssh client which provides users with invaluable ssh access from any web enabled device.

Browser Shell, a secure web based ssh client, has just been released. Web based ssh is an invaluable tool for any Linux/Unix system administrator or home Linux user. You get connect to your ssh server and get root access all through a javascript enabled web browser.

We've all been there, your web server is down and you're stuck behind a tightly secured firewall or on a machine without a terminal or putty! Well, help is at hand, simply register for a free trial today and get 5 days free access. Prices are inexpensive, starting from as little as \$1.25 per month if you sign up for a year.

Unlike many other web based ssh clients, Browser Shell doesn't store any information about your server or record any information you transmit through the terminal. Nor does Browser Shell limit the number of servers you may connect to. You can connect to any ssh server any where any time. It is 100% secure, using SSL to encrypt all communication between your browser and the web server.
