

Strutmasters Finds a New Home

By Strutmasters

Dated: Jul 07, 2008

Strutmasters has found a new 550,000 sqft home, previously occupied by Collins and Aikman, in Roxboro, North Carolina.

Strutmasters, the original provider of Air to Non-Air Suspension Conversion Kits, has recently moved from its previous production facilities. Strutmasters previously occupied the former Tultex building in Roxboro, North Carolina. Strutmasters has moved to a much larger plant previously owned by Collins and Aikman. The new plant is located approximately one mile north of its previous location, and it boasts some major improvements.

The new facility, which boasts 550,000 sq ft, now provides an improved, air conditioned production facility and extensive storage space. It also has improved loading and unloading facilities that are 4 times larger. The new building also houses the company's improved vehicle repair center, as well as the Strutmasters racing team facilities.

For more information on Strutmasters and what they're are doing, go to their website at: <http://www.strutmasters.com>
