

## Free Power From Wind Turbines – A Real Alternative Energy

By Paul Brown

Dated: Jul 13, 2008

*Private energy generation from domestic scale wind turbines is now a reality. The increasing availability of small, effective, affordable, wind turbines offers consumers the choice to take control of power supply for at least the next decade.*

As world wide energy resources dwindle and power costs continue to increase the case for wind power has never been stronger.

Leading European suppliers of small wind turbines, Joliet Technology, are predicting record sales of their recently developed “Cyclone” series two wind turbines. The latest Cyclone wind turbine offers power ranges of between 3kW and 20kW and is supplied as a complete kit with a choice of guyed or free standing towers.

A Cyclone 5kW wind turbine is capable of providing total autonomy for an average to large sized household. The Cyclone 20kW wind turbine is based on large wind turbine technology making it a perfect choice for commercial use or for small private wind farm applications.

Extensive information and assistance in choosing the most appropriate wind turbine is available at [www.joliet-wind-turbines.com](http://www.joliet-wind-turbines.com)

Joliet wind turbines are ideal for battery charging applications or grid connection and are supplied with an on or off grid charge controller. The Cyclone series two models have an integrated automatic or manually controlled yaw control function. Cyclone wind turbines can be customised to reflect customer branding.

Joliet Technology is an international supplier of renewable energy equipment operating from headquarters in Northern Spain with offices in France, and the United Kingdom.

The company’s general philosophy is to provide end users with well designed, user friendly equipment that can be easily installed and requires little or no maintenance. Above all the management believes that renewable energy based products should offer customers a real alternative to conventional energy sources without attracting a premium cost.

Joliet Technology SL also supplies a range of high power LED based street lighting systems, offering up to 80% energy savings over conventional street lights [www.joliet-led-streetlight.com](http://www.joliet-led-streetlight.com) and domestic heat pump products [www.joliet-europe.com](http://www.joliet-europe.com)
