

Record & Control employee activities - Improve productivity

By IMonitor Soft

Dated: Aug 04, 2008

Do you suspect that your employees are abusing business work hours to get 'personal business' done? You are not alone... • • 56.5% of employees feel that surfing the Net or sending non-work-related E-mails decreases productivity.

Imonitor, the global award-winning provider of Monitoring tools, today announced the release of Employee Activity Monitor 4.51?an all-in-one solution that records and controls all employee computer activity and prevents loss of critical and confidential data from leaving the organization

Do you suspect that your employees are abusing business work hours to get 'personal business' done? You are not alone...

• • 56.5% of employees feel that surfing the Net or sending non-work-related E-mails decreases productivity, and 31% of employers said that they restrict employee Internet/E-mail usage. (Vault.com survey)

Imonitor Employee activity monitor can quickly detect and give you the evidence you need to prove that your employees are abusing business work time. It can operate in total stealth - defeating the popular spyware detection tools. These abilities mean you will not have to worry about your employees discovering you are monitoring them - and even if you inform them they will still not be able to tell how.

Key features of Employee activity monitor:

Stealth and undetectable surveillance

Log email, instant message, keystrokes, print Jobs

Monitor FTP file transfer, websites visited, applications used

Monitor and control websites accessing, filter unwanted websites

Send alarms to console when employee steals company secretes

Record MSN, ICQ, AOL and yahoo messenger.chats by users

Remotly control employee computers through remote desktop
