The PC Power Suite 2.0, developed by Maximum Software, is a full and complete solution for all the PC maintenance and computer security needs. The suite has tools necessary to keep and have your computer system smooth running and clutter-free.

The PC Power Suite 2.0, developed by Maximum Software, is a full and complete solution for all the PC maintenance and computer security needs. The suite has tools necessary to keep and have your computer system smooth running and clutter-free. Unlike other "similar" applications, this program has the most complete and updated system tools and computer security functions to efficiently optimize and protect the performance and functionality of your computer.

There are a dozen functions and features that can be found on the PC Power Suite 2.0 that are all necessary to efficiently optimize and maintain the smooth condition of your computer. In addition, it also has an effective suite of memory boosters and disk defragmenters which can speed up the operations of your computer, as well as reduce, or even entirely prevent, system crashes. There are also a set of tools to fully customize the look of your Windows-based desktop, as well as eliminate unused files and folders within the disk partitions on your computer.

The Memory Optimizer function of PC Power Suite 2.0 is a tool that can enhance and thus, speed up the running conditions of your computer. It doesn't just tweak the virtual memory settings of your computer's operating system, but also optimizes your computer's physical memory as well. The program does this by carefully adjusting the physical memory allocation default settings of your computer. With the presets available as options, you are assured of not making any irreversible mistakes on the adjustments necessary to make you computer all well and running smoothly. The PC Power Suite 2.0 also provides you the option to choose which of the background services and programs installed on your computer would be given importance when it comes to both physical and virtual memory allocations. There is a set of presets to choose from regarding the amount of time and memory cache; these, in turn, free up you space so as for your computer to maintain the speed of its optimized memory allocation performance.

The registries of most operating systems get cluttered by frequent installations and uninstallations, and might be destroyed beyond repair once malware infects the computer system. The Registry Defragger and Optimizer is a useful tool to virtually eliminate the probabilities of system crashes. This function of the PC Power Suite 2.0 program provides you with an easier means to regularly refresh your operating system's registry, all through efficient pre-configured ways. The suite even has the feature of automatically fixing registry problems, once the program is used to scan the registry for any errors or susceptible flaws.

The Spyware Detective function of the PC Power Suite 2.0 is a very good way to protect your privacy and assure the security of both your online transactions and your computer. Among the malware infections, a spyware infection is regarded nowadays as one of the hardest to eliminate, given that the problem can be acquired from internet browsing. Since completely deviating from internet browsing is not an option, getting the PC Power Suite 2.0 to protect your computer from spyware is a very efficient way to dramatically reduce the chances of your computer being infected with malware, and most especially, spyware. This is because this program's Spyware Detective can be set as a background service, carefully monitoring your computer's security from any spyware and malware infection. Yes, the program can even

detect other malware infections aside from spyware activity.

The Privacy Protector, another useful function of the PC Power Suite 2.0 program, can be used to ward off potential hacker attacks and other privacy issues we are all exposed to, once the computer is connected to the internet. This is because this function can be designated as your default firewall, which is easier to customize and far safer to use than the bundled firewall feature of your operating system. It even offers more protection against hacker attacks and viral infections.

The Find Duplicate Files function of the PC Power Suite 2.0 program can be very useful in speeding up the performance of your computer. This is because unnecessary files just clutter the data storage space of your computer, and gives the hard disk of your computer a hard time accessing the files you need to open. This makes the entire searching and opening process virtually slower than a clean hard disk on your computer. But since picking which files are duplicates and are unnecessary can be a tedious process, this tool, enclosed with the PC Power Suite 2.0 package, can provide you with an easier means to clean up the disk partitions on your computer with maximum precision and efficiency.

The System Files Backup and Restore function of this program can be a lifesaver during those times of viral infections and other malware penetrations plaguing your computer system. These infections usually damage the system files of your operating system, leaving you with an unusable operating system. With this tool, you are assured of easy operating system repairs and troubleshooting. So get rid of all those worries that come from those highly probable viral and malware infections you could get from your internet musings.

The Safe Uninstaller, on the other hand, can provide you with a clean and smooth running system registry, like the Registry Defragger and Optimizer tool already enclosed with the PC Power Suite 2.0 package. An unsafe uninstallation usually results in a corrupt registry, something that even manual registry editing would have a difficult time to fix. So, here is a tool that always makes it a point to provide your computer system's registry an efficient means of problem-free workload by regularly protecting it from unsafe uninstallations.

These are just some of the 30 useful and necessary features and tools enclosed with the PC Power Suite 2.0 package. With all these tools in one single package, which costs \$29.97, you are given a cost-effective option to efficiently optimize, protect, and maintain the performance of your computer. The PC Power Suite 2.0 is from Maximum Software, a highly credible IT product and service provider, with years of experience when it comes to PC maintenance and computer security.

The PC Power Suite 2.0 program is compatible with all Windows-based machines, and an evaluation version can be downloaded freely from several software demo sites on the internet. But to assure that you get the authentic evaluation version of the PC Power Suite 2.0 program, you should check out Maximum Software's website for a download of their product.

If you think this program would be very useful for your purposes of easily maintaining and securing your computer based from your use of the PC Power Suite evaluation version, you could go and get it from the website of Maximum Software. The website of this company was designed for maximum usability, and the information was written down with readability in mind. The site also offers a secure online transaction process, so your personal information and cash transfer are safe from prying eyes.

There are two ways to get the licensed version of this program. The first option is for you to go through an online transaction, which would provide you a link to a secure FTP server for the download of the full version of Maximum Software's PC Power Suite 2.0. The second option is for you to send in a check or a

wire transfer to Maximum Software; the company would gladly send the PC Power Suite CD straight to your address.
