MAGIX Xtreme PhotoStory on CD & DVD 7 deluxe makes exciting home theater even easier

Miami, 10. September 2008 – MAGIX, Berlin's multimedia specialist, is releasing the seventh generation of its slideshow classic. MAGIX Xtreme PhotoStory on CD & DVD 7's new user interface now makes it even easier to access optimization features, effects, animations, or camera movement via the completely reworked Media Pool. And new functions like exact creation of panoramas using multiple photos can also be started via the Media Pool. Now photos from digital SLR cameras and scanned images in 3:2 format can also be displayed automatically on the entire screen without black edges. Your slideshow can be burned directly and without any steps in between using "EasyBurn mode", and it's just as easy to upload the slideshow to your MAGIX Online Album with complete start menus. Besides these additions to the operation (which can be switched from a light to a modern, dark interface as desired) a lot has been done below the surface. A deep reach into the program's effects (transitions, for example) has produced fluid and effortless full screen playback as a result of performance improvements. Starting from September 30, MAGIX Xtreme PhotoStory on CD & DVD 7 will be available from retailers for \$29.99.

Price and Availability:

MAGIX Xtreme PhotoStory on CD & DVD 7 is available from 30th September at \$29.99 from major US retailers and online part
