Dated: Oct 21, 2008

*The capability to e-prescribe in today's hectic office environments is important; how software integrates that capability within an EMR system is essential.*

Electronic Medical Record (EMR) systems are becoming increasingly pervasive in today's busy office environments. But the features and functionality of each system must be weighed alongside other perceived benefits and advantages. One question that busy practices served by Fox Meadows Software's never have to ask is "Is our ability to e-prescribe being maximized?" E-prescribing itself is more than a luxury these days; it's an essential safety issue that can be essential in dramatically decreasing liability. It's also a perfect complement to efficiently functioning EMR systems.

While the freedom of a customized system right out of the box tends to foster an office's peak efficiency, by itself it usually isn't enough if e-prescribing isn't functioning in harmony with the "big picture" EMR systems being used. But some EMR systems available in today's medical arena may not have the necessary features to utilize the magic of E-prescribing to the extent necessary, possible, or desired. Up to 40% of EMR systems out there don't even incorporate E-prescribing in any sort of user-friendly fashion. User-friendly is the key in making any technology practical. That's why MediNotes e from Fox Meadows Software creates a script culled from its extensive medical library in a single instantaneous step – so that the advantages of e-prescribing can be maximized in real time. E-prescriptions can be customized or reproduced as needed – a feature rarely found in EMR systems of any complexity.

When you think EMR, think MediNotes to maximize your e-prescribing load. It's innovations like this which gives Fox Meadows Software company its reputation for excellence.
