

Netrino Announces Updated Embedded Systems Training Course Schedule for 2009

By Netrino

Dated: Nov 17, 2008

“Developing Effective Coding Standards” course joins “Embedded Software Boot Camp” and others on enhanced schedule

Netrino, The Embedded Systems Experts and a leader in embedded systems training and engineering services, today announced a comprehensive Winter schedule of Netrino Institute training courses. Netrino Institute’s new “Developing Effective Coding Standards” course will be taught publicly for the first time. Built upon Netrino’s extensive experience in designing embedded software and leveraging the recently published “Netrino Embedded C Coding Standard” book and Netrino’s Zero Bugs...Period design methodology, this course focuses on empowering organizations to create bug-eliminating embedded software coding standards that also improve maintainability and portability. In addition, the updated schedule includes public offerings of Netrino Institute’s popular “Embedded Software Boot Camp” and “Multithreaded RTOS Programming” courses.

“Netrino Institute’s courses are all conceived to assist embedded software engineering teams to increase the quality of embedded software,” said Michael Barr, Netrino’s president. “Netrino Institute’s Developing Effective Coding Standards course and the companion Netrino Embedded C Coding Standard book accomplish this goal by providing an excellent example of a key engineering process document and a method to augment this document for their own teams.”

The one-day Developing Effective Coding Standards course is offered for \$1,595. The two-day Multithreaded RTOS Programming course is offered for \$1,995 and the five-day Embedded Software Boot Camp course is offered for \$3,995. Early registration and multi-seat discounts are available, and both courses offer an unconditional money-back guarantee.

Full course details, including a complete course schedule and registration/pricing information are available online at Netrino’s website (www.netrino.com/Embedded-Systems/Training-Courses/Calendar).

About Netrino

Founded in 1999 and based in Columbia, Maryland, Netrino provides training and engineering services related to the development of reliable embedded systems. The company has three business units: Netrino Institute trains engineers in best practices, Netrino Consulting provides unbiased engineering guidance throughout the engineering lifecycle, and Netrino Labs assists companies with product development.

Netrino, The Embedded Systems Experts, Embedded Software Boot Camp and Zero Bugs...Period are trademarks or service marks of Netrino, LLC. All other trademarks used in this document are the property of their respective owners.
