

## **Uganda national's medical hospitalization for parkinson's disease treatment at Bangalore in India.**

*By Dr. Bojwani*

*Dated: Nov 25, 2008*

*It was the devoted medical care and hard work of the Indian surgeon and his medical staff that enabled Jawanza to get recovery from Parkinson's disease.*

A Uganda national named Jawanza Perry got medical hospitalization for Parkinson's disease treatment at Bangalore in India. Jawanza aged to be 41 is working as a police cop at Uganda, one year before in 2007 he noticed some symptoms like tremor, or shaking, often in a hand, arm, or leg, stiff and aching muscles plus he was unable to control the movement of his muscles and limbs. After getting a medical CT scan the doctor told him to approach a good neurologist or brain surgeon as he had Parkinson's disease and Parkinson's disease treatment was told to be very helpful to him for a speedy recovery so that he could retain to his daily life activities without trouble. Now the native city Pallisa where Jawanza was residing had no experienced surgeon to cure Parkinson's disorder moreover the cost of Parkinson's disease treatment if taken by western doctors was likely to create trouble for his pocket. While searching for affordable cost medical options on the internet Jawanza came across an article on Indian medical tourism stating about the cost effective and international quality medical treatment packages offered by Indian doctors so he immediately contacted an international medical tourism consultancy and got himself registered for an appointment with an Indian neurosurgeon for his Parkinson's disease treatment at Bangalore in India. It was the devoted medical care and hard work of the Indian surgeon and his medical staff that enabled Jawanza to get recovery now after a post surgery rest of 1 month Jawanza is preparing to resume back to his job

Parkinson's disease treatment is used to cure Parkinson's disorder which is a chronic health defect. Parkinson's disease is caused from the degeneration a number of nuclei in the dopamine-producing nerve cells in the brainstem. Parkinson's disease is a chronic, progressive neurodegenerative movement disorder. Tremors, rigidity, slow movement (bradykinesia), poor balance, and difficulty walking are the primary symptoms of Parkinson's disease. Parkinson's disorder appears generally upto the age of 60 and women are more likely to have this disorder. The medical diagnosis of Parkinson's disease that involves CT scan and magnetic resonance imaging is based done when the patient has two or more signs. In some cases In many cases, the medical diagnosis for Parkinson's disorder is made after observing that symptoms have developed and become permanent over a period of time. Parkinson's disease treatment is done when medication to be effective or when medication side effects, such as jerking and dyskinesias, become intolerable. The two main procedures involved in Parkinson's disease treatment are Pallidotomy: It involves making a lesion in the globus pallidus. That is, destroying some of the cells in a particular part of the brain that controls movement. Deep Brain Stimulation (DBS): This procedure involves implanting a small metal electrode into the brain. The electrode is then attached to a pulse generator which is stored implanted in the chest subcutaneously . Other methods are Thalamic stimulation, Pallidal stimulation and Sub thalamic DBS

Indian neurology hospitals at Mumbai, Hyderabad and Bangalore are using the latest medical techniques for Parkinson's disease treatment in India. The Indian neurologists are well trained and have profound knowledge of human neurological and chronic disorders. More over the cost of treatment for neurological disorders and chronic diseases in India is less by half of that which is charges by doctors of western countries. Indian medical treatment services combined with medical tourism in India promises abroad patients to provide health recovery with international level hospital care at a less cost budget. Moreover when an abroad patient arrives at an Indian hospital the medical staff employed there take care of his initial as well as post surgery requirements. Medical tourism in India guides foreign patients in planning a hassle

free medical trip as well as surgical treatment in India by arranging them medical visa, advance travel reservation as well as medical appointment with the doctor in advance just a couple of weeks before the arrival of the patient to India thus saving him from unnecessary trouble.
