

UltraTouch Lipodissolve, Newest Technology--Lose Inches and Reshape Your Body, No Surgery No Needles

Available exclusively at The Fountain Medical Spa & Boutique, Tennessee's Anti-Aging Center

Jan. 26, 2009 - [PRLog](#) -- Mt. Juliet, Tenn.—People have endured much pain to have their bodies look and feel well. Invasive liposuction surgery has been popular for decades now to lose inches and sculpt the body. A new technology available that does NOT include invasive surgery or needles to accomplish the goals of reshaping and losing inches which is found highly popular amongst Hollywood celebrities.

Opened last fall in Mt. Juliet, Tennessee, The Fountain Medical Spa and Boutique is finding extreme success with the all new UltraTouch Lipodissolve by MesoDerm. The procedure offers the same results as traditional liposuction but without the downtime and pain. Available exclusively at The Fountain Medical Spa & Boutique, UltraTouch Lipodissolve uses an advanced patented drug delivery system which allows for the painless treatment of a variety of conditions which eliminate all complications resulting from standard injection treatments or invasive procedures.

Employing a process called Mesoporation, UltraTouch Lipodissolve uses the only FDA Approved Class 3 Medical Device (Mesoderm). Treatments are performed by a well-trained medical staff at The Fountain Medical Spa & Boutique under the supervision of Licensed Physician, Dr. Charles Emerson III. This process takes place over days and weeks allowing for a smooth removal of fat without the development of dimpling or loose skin. UltraTouch Lipodissolve is a body sculpting technique and as such can be employed on any area where there is an undesirable accumulation of fat.

“We have had phenomenal success with our patients receiving the UltraTouch treatments,” shares Keri Koch, RN. “The fortunate part of this technology is the ease of administration and the results. As much as we enjoy our work, their excitement makes it that much more rewarding.”

“The main reason for opening this place was because of my wife’s desire to ‘take care of people,’” shares Harold Davids, owner of The Fountain Medical Spa and Boutique. “Linda also wanted it to provide the best services and products available in the industry. For nearly 2 years we researched services and studied the market before we opened the doors. I’m pleased to say we have accomplished that goal!”

Cosmetic Mesoporation Treatments are also offered at The Fountain. These ‘Cosmetic Medicine’ treatments address many skin conditions such as acne, face/neck lift, wrinkles, loss of elasticity, face shaping, scarring, discoloration and puffiness under the eye area as well as hyper pigmentation. The novel, patented process allows painless delivery of pharmaceuticals and medically active compounds at the depths of 2-3 cm into the skin and may only be performed by The Fountain licensed medical technicians.

How it works:

Body Sculpting Treatments

UltraTouch Lipodissolve by MesoDerm is a procedure used for toning skin and body sculpting to reduce, eliminate and contour smaller and specific undesired fat pockets. Effectively sculpts and contours excess adipose pockets in localized and regional areas such as flanks, (love handles), bra lines on the upper back or underarm area, knee and ankle bulges as well as the male and female breast area and even the neck and chin.

Cellulite Treatments

There's only one medical treatment proven to reduce or eliminate cellulite safely, creating a smooth and toned skin texture. UltraTouch by MesoDerm gets results by targeting the underlying causes of cellulite, not just the outward appearance. UltraTouch can eliminate cellulite on the legs, buttocks and thighs by breaking down the connective and fibrous tissues that result in an orange-peel appearance of skin to produce a smooth contour. The average patient can eliminate visible cellulite in 6 to 10 sessions. Some patients require additional treatments if their cellulite is particularly severe.

Stretch Mark Treatments

Stretch marks are inevitable for most people—women and men. It doesn't matter how they happen—it doesn't even matter why they happen. UltraTouch treatments are aimed at reducing visible signs of stretch marks, decreasing scar size and normalizing skin discoloration. A combination of more than a dozen vitamins and amino acids, derived from herb and vegetable extracts, are introduced into and below the scar tissue, helping to correct the damaged scar tissue from within. The anti-oxidant vitamins encourage the production of collagen and elastin.

Breast Lift

UltraTouch mini breast lift is designed to create a lifting effect by helping to tighten the chest muscles as it firms and tones the skin. The mini breast lift is the ideal solution for creating a more rounded and prominent profile, restoring confidence to wear strapless gowns or tees.

Neck and Chin Lift

UltraTouch neck and chin lift treatments have proven to show significant results by eliminating the fat pads under the chin and reducing the thicker regions of the neck to create a more chiseled and defined profile.

As we age the skin and elastin fibers become weaker allowing a more aged appearance and loss of skin texture. Increased collagen production is stimulated to strengthen the tissues that weaken over time. The skin is also infused with skin rejuvenating products that revitalize tone and tighten excess skin.
