

## Smoking Indoors Legal Again in Ontario

By Bill Taskas

Dated: Feb 12, 2009

*SmokeStikCanada is proud to introduce the SmokeStik to Canada. The SmokeStik allows smokers to get their nicotine while holding a "cigarette" in their hands, inhaling and exhaling "Smoke". A healthier way to smoke - no tar!*

SmokeStikCanada.com is pleased to announce that it is now an authorized distributor of SmokeStik.

**SmokeStik – THE HEALTHY WAY TO SMOKE**

No more bad smells! No more nasty ashes! No more worries of second hand smoke! No more harmful intake!

No More Limits - Smoke legally in restaurants, bars, stores, elevators, hospitals, trains, airports, etc. yet get your full nicotine fix while "smoking"!

Now Legal in Ontario - see website <http://www.SmokeStikCanada.com> under Legal Opinions for Comment from the Ontario Ministry of Health - Smoke Free Ontario Legislation.

SmokeStik is a revolutionary device that resembles a traditional cigarette and fully recreates the smoking experience, including "smoke," without any harmful side effects.

It is a clean alternative to traditional cigarette smoking. It is free of carbon monoxide, tar, and the other 4000 or so cancer-causing chemicals found in traditional cigarettes and cigars. An electronic cigarette is essentially litter-less, in that it is free of ashes and stubs.

Also, it is much safer since it is free of fire.

What you are "smoking" is a mist or vapour. This vapour is created as liquid nicotine and propylene glycol are vaporized by a tiny component called the atomizer.

### How It Works

The mouthpiece contains a replaceable cartridge filled with liquid. The main substances contained in the liquid are nicotine, propylene glycol, and optional flavors. When you take a drag on the SmokeStik, the air flow is detected by a tiny sensor. A

microprocessor then activates the atomizer which injects tiny droplets of the liquid into the flowing air and vaporizes the

nicotine. This produces a vapor mist which you inhale - just like smoke from a traditional cigarette. It tastes and feels just like

a regular cigarette, and you exhale "smoke," just like you would with a traditional cigarette. And, you get the nicotine delivery

without any of the harmful chemicals or tar that traditional cigarettes contain! An orange LED at the tip of the device is also

activated to simulate the burning end of a lit cigarette. A high-density Lithium Ion battery powers the device and will last all

day on a normal charge. Your starter kit will include two batteries so that you may use one while your second battery is recharging.

Retailers wanted throughout Canada to distribute the SmokeStik.

Please contact [Bill@smokestikcanada.com](mailto:Bill@smokestikcanada.com) for more details.

###

SmokeStikCanada distributes the SmokeStik throughout Canada.

The SmokeStik allows smokers to get their nicotine "fix" anywhere & everywhere.

Looks and acts like a real cigarette with "smoke".

Legal in Ontario to use anywhere smoking is prohibited.
