

The Pendulum Group Expands Into Print Fleet Management And Cabling

By Chris Gill

Dated: Mar 13, 2009

New services save time and money for corporate clients.

Markham, ON: The Pendulum Group (www.thependulumgrp.com) announced the official introduction of two new services aimed at corporate clients with larger printing and network needs. Print fleet management offers to save clients money and reduce downtime for entire fleets of printers, while on-site cabling services provides rapid, professional cable installation to support local networks.

These new services are the result of The Pendulum Group's combined expertise. The company is the offspring of a merger between Skytronix and Canadian Trutone Laser. The combined business is able to serve corporate clients with more complex needs.

The Pendulum Group's new cabling division installs durable structured cabling installations in CAT 3, 5e and 6. Installations are designed to require minimal maintenance. Furthermore, the cabling division offers support for Moves, Adds and Changes (MACs) to clients.

Print fleet management is a complete software and service solution that includes printer repairs, toner refills, usage monitoring and on-site service for large groups of printers. Typical clients operate fifteen or more printers in their fleets.

These corporate services will not impact the Pendulum Group's smaller scale services. Clients with more modest printer repair, sales and toner cartridge needs can still count on the company's exceptional service throughout Toronto, Markham and the rest of the GTA: a tradition it proudly inherits from its parent companies.

To inquire about these and other services, interested parties should email info@thependulumgrp.com or visit thependulumgrp.com/ContactUs.php.
