

Clean Up With Innovative New Keyboard

By Leigh Cooke

Dated: Apr 24, 2009

SMOOTH OPERATOR: Keytools announces the release of CleanKeys.

SMOOTH OPERATOR: Keytools announces the release of CleanKeys.

Computer technology experts, Keytools, are proud to announce the release of its innovative new keyboard – CleanKeys.

CleanKeys is one of the world's easiest to clean keyboards, and is another exciting launch in Keytools' 20 year history.

CleanKeys is unique in its design and its "clean-ability". With a smooth glass surface and no nooks or crannies to harbour dirt and bacteria, CleanKeys contributes towards a hygienic environment.

Sales manager Phil Guest said: "This is an exciting new product for us, and we're looking forward to showcasing CleanKeys at the Safety & Health Expo this year, especially now it's a finalist in the BSIF Safety Awards.

We hear new reports every week highlighting the issues of infection control and we're confident that we've found the answer. CleanKeys is the ideal computer solution for sterile environments where hygiene is a must, such as hospitals, laboratories and food processing environments."

Keytools' customers also believe CleanKeys to be vital in the fight against infection.

Ron Moody, an NHS Trust Health & Safety Manager said: "CleanKeys ticks all my boxes for infection control. Nothing can be caught or trapped in the keyboard. And with the in-built mouse, it's the perfect solution."

From left-handed mice to ergonomic keyboards, Keytools provides nearly 1,000 different products to help people overcome difficulties in using computers, including sufferers of repetitive strain injury (RSI).

Come and try the CleanKeys on Stand J61, Hall 1, at the Safety & Health Expo 2009.
