

Getway Raid Data Recovery Software 2.0

By Getway Recovery Ltd

Dated: May 30, 2009

Getway Raid Recovery Software can help you recover data due to the following possible data loss situations: File Deletion; Accidental Array Format; MBR damage/ loss/ excursion; DBR damage. It supports RAID 0, RAID 5, RAID 5E, RAID 5EE and RAID 6.

Getway Raid Recovery Software can help you recover data due to the following possible data loss situations: File Deletion; Accidental Array Format; MBR damage/ loss/ excursion; DBR damage; One or two RAID hard disk damage, etc. Getway Raid Recovery Software support "Smart Mode", "Manual Mode" and " User-defined Mode " working modes.

Main Features:

* Smart Mode

Smart Mode can help user recovery the RAID easily, quickly and conveniently, even though the user doesn't have the technical knowledge on RAID recovery. User doesn't need to know the RAID Parameters, such as Stripe Size, Drive Offset, Direction of Rotation, Drive Order, etc. Getway RAID Recovery will help you analyze the drives and work out all details of the parameters.

* Manual Mode

Select the "Manual Mode", you should know all details of the RAID, and also you should correctly set up all the parameters, such as Stripe Size; Drive Order; Drive Offset; RAID Type, etc. In general, we just recommend the "Manual Mode" to the professional user, and also we don't suggest user directly use the "Manual Mode". We suggest user use the "Manual Mode" to analysis the RAID when he can't get the data by the "Smart Mode", or the RAID type is special, or encounter the file system which can't be supported by the system.

* User-defined Mode

"User-defined Mode" is the powerful complementarity to the RAID Type which can't be supported by the system. User can set up the RAID Type, the serial number on every strip, thus it can increase the flexibility of the system.

* Files View

User can directly view the partition data by the "Files View". User can intuitionistic know the Smart Mode result /manual set parameters is right or not. If the result/ parameters is right, user can create the image.

* Read-only

It ensures the 100% intactness of the data on your RAID when doing RAID recovery. It will not try to "fix" your RAID. It just create a copy of your RAID.

* Guide Operation

Easy, quick and smart operation;

System Requirements:

- * Pentium processor
- * 32-128MB RAM
- * Windows95/98/ME, Windows NT, 2000, XP, Vista
- * One problem-free hard disk to boot from
- * Disk controller card capable of handling all the drives in your RAID individually
- * Storage space for holding the reconstructed RAID
