June 2, 2009 - *PRLog* -- M3i/M3L features
M3i/M3L is the world's most beautiful game cart of latest fashion with high-performance market positioning. Its rich and user-friendly interior and charming controllability make it a fashionable unique-function game cart popular with customers. It may be used to download home games, watch movies, listen to music or be switched to MDSI / NDS game console through PC. You may transfer movie and music files normal SD/TF card reader provides through PC to SD/TF card. Then connect M3i/M3L inserted with a SD/TF card to GBA (SP) or NDSi/NDS game console. It will start to work after game console is started. In addition to equal performance features with MP3, it allows users to play free games without specific sources or permission and watch movies, etc. It supports various homebrew games and its biggest advantage is that it allows you to control homebrew software directly, browsers and the like. It supports homebrews so well for you to create your own programs or games.

  Feature

  E-album Feature

Direct compatible with BMP and JPG picture files, the pictures you are browsing will be played in different types at random from time to time.   PDA Feature

The feature enables you to know any of your business information, so that you may enjoy life with the better information technology.

  MSN Feature

Wireless connection to Internet allows you to surf in the vast networks, make friends and chat.   Movie function

Crystal engine.

High quality &clear picture processing system.

The new boundary of NDS video and audio.

  Compatible with all NDS games, no drag delay.

It is 100% compatible with all GBA games and runs games freely without a patch. Advanced storage systems enables accurate save of documents prepared in any save type. And, you even can save them directly to the CF / SD card with only a few simple steps. Our on-board RTC can run all RTC-based .

Compatible with all common types of movies.

The compression system enables you to save a number of super-long movies on a single card! It is 100% compatible with all Crystal Engine-transferred movies and GBA ROM movies. M3 is also packed with crystal engine software, so you can convert your own data collection to GBA or NDS formats. Please note that there are many websites available that provide newly issued films in Crystal Engine format.
  Advanced real-time storage.

You can not normally play games? You can use the real-time memory function to save document. It can promptly create or restore numerous documents stored by simply holding down the A, B, L and R buttons at the same time. It is applicable to all Nintendo handheld consoles.
    No drivers required.

We've done our best to insure that the M3 is easy to install and easy to operate. You won't even have to download any drivers if your OS was made later than Windows 98.

May be used as a U disk and will run immediately after being inserted.

CF / SD cards and card readers can serve as a U disk, and no driver is required so long as your OS was prepared later than Windows 98. The burning procedure of a game is easier than before and can be done in two steps: copy and paste. A 128M game can be downloaded from a Pc in 10 seconds. The card has large capacity that it can save even more files, and you even can manage a file system through your GBA (SP) or NDS devices.

Built-in Emulators.

No need of any additional software to manipulate FC, NES, SNES, GB, GBC, SMS and other ROMS. Enjoy to the best the pleasure with good games passing through your hands .

Small power consumption.

Our low-power consuming ASIC technology enables your GBA SP to run games 9 hours continuously.

No damage to CF/SD cards

M3 carts may be safely applied to CF and SD cards, but different from other carts, you don't need to worry if it will harm your media players.
