

Suspenseful Space Thriller Novel Burnout Impossible To Put Down

By Stephanie Osborn

Dated: Jun 12, 2009

Burnout: The mystery of Space Shuttle STS-281 is a roller coaster ride into adventure. A space shuttle and crew are lost on re-entry. Was it really an accident?

Former Space Shuttle payload flight controller's novel mirrors real life - or does it?

HUNTSVILLE, Alabama - Burnout is a fast-paced cliffhanger of a novel in the best tradition of Martin Caidin or Michael Crichton, about a fictional Space Shuttle disaster which turns out to be no accident.

As the principal investigators - "Crash" Murphy, former flight director and re-entry expert, and Dr. Michael C. Anders, astronomer - dig deeper, they discover the signs of something unusual - and as they do, friends, lovers, and colleagues involved in the investigation begin to die in mysterious "accidents." They find themselves on the run, searching for answers, wondering who they can - and can't - trust, in a game of cat and mouse that spans more than one continent, and may span more than one planet.

What happened to the Shuttle?

Who is responsible and why?

Why is the government calling it an accident?

Why is someone willing to kill to keep it a secret?

And just how big is the conspiracy?

Find out the answers in the pages of Burnout: The mystery of Space Shuttle STS-281.

+++++

"Hard-edged SF that wraps a compelling mystery around "this is the real thing" space science." ~Holly Lisle, author of The Ruby Key: Moon & Sun I.

"Burnout is a compelling, impossible to put down...novel in the class of Skylark of Space or "Lifeline." ~Jim Woosley, Ph.D. physicist, Heinlein essayist

"I opened the cover...in the morning and couldn't put it down! This intriguing maze of plot twists, danger, intrigue and excitement would make an excellent movie." ~Ann B. Keller, author of Vortex of Revelation

"...a real page-turner...a great read...recommended." ~jkOnTheRun/ Mobile Tech Manor
