

Innalogic Launches the Spyder Surveillance Solution; Bonding Infrared Cameras with a Cellular Router

By Coda Octopus Innalogic

Dated: Jun 25, 2009

Coda Octopus Innalogic unveils the Spyder Surveillance Solution, combining infrared cameras, a cellular router with a hardened PC to provide an advanced security technology solution.

Innalogic's Spyder Surveillance Solution combines high power 26x optical zoom PTZ **infrared cameras** (all weather day/night capability) with a rugged PC and a **cellular router**. The camera can be either gimbal mounted on a telescopic pole (2 axis of movement) and attached to a vehicle to create a mobile surveillance solution to police larger areas or in a fixed position mounted to a building or tower.

<http://www.innalogic.com/spyder-surveillance-solution.html>

The PC is a military grade ruggedized device that is modular and capable of adding a number of features for specialized applications. The Cellular router is also hardened and supports up to 5 cellular providers. A single device can bond multiple channels to create a single bonded VPN for broadband access in remote areas where only cell service is available. Real-time video can be stored locally or transferred real-time to a central site.

The Spyder allows signals to be transferred in areas otherwise seen as inaccessible, transforming an ordinary security setup into a high-speed technologically advanced defense mechanism. Combining hi-tech infrared cameras with the blazing transfer speeds of a cellular router, the Spyder Surveillance Solution utilizes several components to create a simple and powerful surveillance solution.

Border patrol, Port Security and local, state and federal law enforcement can benefit from the advanced technology and thought that has been engineered into the Spyder Surveillance Solution.

To learn more about the Spyder call 1-801-973-9136 (Ask for Innalogic's video surveillance sales for information and pricing), or visit <http://www.innalogic.com>.

###

Innalogic is a provider of standalone and rapidly deployable wired and wireless security camera systems, serving specific niche markets where COTS solutions would not suffice due to environmental, technological, and/or physical constraints.
