

How To Make Do It Yourself Solar Power System To Save On Electricity

By Andy O'Sullivan

Dated: Jun 28, 2009

Learn how make Do It Yourself solar power system to generate free supply of electricity from the sun. Save 80% of your electrical bills and build a green and healthy environment.

Do It Yourself Solar Power - One of the best ways to save money on utility expenses is to use the sun's capability to generate free usable electricity. With the economy being as bad as it is right now, solar power has become the no.1 alternative to save money and cut costs.

1. Using Solar Power is Cheap and Easy

Contrary to popular belief, building a Do It Yourself solar power system is really easy and inexpensive. The same way you would follow the instructions or owner's manual to put together anything else, the same holds true for this as well. The materials that you need are available at your local hardware store and the whole project itself will cost no more than \$200. So that essentially means that you are paying no more than \$200 for homemade solar electricity that will get you a lifetime's worth of benefits.

2. You Can Slash Your Monthly Electrical Bills Plus Make Extra Cash For Yourself

Your electrical bills can be lowered nearly 80% just from tapping into Do It Yourself solar power. That could easily mean \$1000's in savings every year! And depending on which state you live in, you may have the opportunity to sell your extra electricity that you produce in excess. In these cases, the utility companies will pay you for the extra electricity that is produced because they are able to share it with other consumers that are on the grid.

3. Achieve Tax Incentives

By using a Do It Yourself solar power system, you will receive tax credits from the government. This is their way of rewarding you for using clean and environment-friendly energy.

4. No More Power Outage

Since the energy is coming directly from the sun, you will no longer need to deal with the inconvenience of power outage.

5. Protecting Our Environment

Since solar power is clean, green energy, you are helping the environment in a good way. You are not receiving power from any fossil fuels, so there are not any pollutants that are being put back into the air.

You can install the Do It Yourself solar power system anywhere you see fit as long as they are exposed to an adequate amount of sunlight. Tens of thousands of homeowners are turning to renewable energy every day. Isn't it time that you also consider harnessing Do It Yourself solar power and its benefits?
