

Ductworks Helps Homeowners Take Advantage of Energy Efficiency Tax Credits

Do-it-yourself heating and air conditioning provider Ductworks.net introduces a simplified way to make use of the economic stimulus plan.

June 29, 2009 - [PRLog](#) -- Ductworks.net, a leading do-it-yourself heating and air conditioning ductwork provider, offers online help for homeowners that want to invest in energy efficient home improvements and benefit from President Obama's economic stimulus plan. Upgrading to a cleaner, more efficient air conditioning and heating system can now help both your health and your bank account.

The \$787 billion initiative is one of the biggest steps the federal government has ever taken to encourage energy-saving home improvement methods. There are now generous incentives to invest in energy-efficient home improvements, such as DIY geothermal heating, efficient heating ductwork, or insulation. Just last year, these improvements would receive a 10 percent tax credit; today, the government is offering up to 30 percent.

In order to make the plan's benefits more easily accessible to homeowners, Ductworks products can be explored and purchased online. For do-it-yourself home improvements, installation guides and instructions are also available.

Industry leaders have seen significant growth in energy-efficient additions and remodeling. "The home improvement tax rebate for high-efficiency products is certainly a lucrative offer," says Mike Hall of Ductworks.net. "Consumers are sure to make the most of it through the end of the year. It'll be great if [the bill] is extended for another year."

Ductworks.net has been offering assistance with HVAC duct installation processes to homeowners and builders for over 25 years. The company carries a full line of products for Do-It-Yourself customers looking for affordable installation assistance, including heating ducts, Goodman furnaces, Goodman heat pumps, DIY air conditioning units, and other products and supplies.
