Dated: Jul 19, 2009

Bret Parker renewable energy solutions. Home owner, renewable energy enthusiast reveals his plans and designs for a complete home power system eliminating his dependence on fossil fuel generated electricity. Alternative energy systems including solar

Bret's family uses their own electricity without the constant fear of increasing power costs and worry about having the money each month to pay their power bill, which Bret agrees makes life a whole lot easier and the money is put aside for other things.

Bret's dedication and finding ways to use an alternative energy source has benefited all home owners so they can follow the same steps to power their homes the same way.

The most amazing thing about all this generated electricity is its affordable and without the huge price tag that energy companies charge to build a home power system. Installation of a complete home energy system using solar power and wind power cost \$\$\$\$ thousands of dollars

Everyone would like to stop paying for their electricity.

Set out all the details for his complete home energy system in manuals and videos and kept the price as low as possible so home owners like you can afford to follow and power their homes using this renewable energy that is available outside the house.

Solar panels, diy homemade wind generators, complete renewable energy solar electric systems to control electricity for the use of electricity in your home.

Bret Parker offers this renewable energy information and includes "how-to" information as well as formula calculators for a number of different needs designed to make it easier to determine your specific energy requirements.

Bret explains how to make your own energy and how to convert wind power into usable FREE electricity by building your own diy homemade wind generator at home for less than \$130. .

You Can Do the Same - Live "Off the Grid" with a - DIY Homemade Wind Generator.

First Bret researched the best way that he could afford to power his house with the renewable energy and bought a set of DIY manuals from the internet.

It soon became apparent that the manuals/guides were lacking the knowledge and knowhow for the ordinary person to follow and not only that but their plans were insufficient.

So after a couple of years of research and testing Bret came up with a suitable solar/wind power system that fitted into his house and generated three quarter(3/4) of his electricity use at full peak load between 4 pm – 7 pm.

What does this mean to you? <http://www.make-a-solar-panel.com>

You follow Bret's instructions and power your house the same way without the failures and disappointments Bret went through.

Bret's design of the power system generates more power during the day when power loads are at their lowest and actually turns your power meter in reverse which is what the power companies do not want you to do or know.

Tested and retested the power system designs and they work so you can be confident following the design plans that your diy homemade wind generator will also work.

The important part about this home power system, you can add another diy homemade wind generator or add more solar panels to the system as time or money allows. There's no limit to what you can generate in the way of renewable energy. You have two options. Tie into the grid or live completely off the grid.

Solar /Wind Generated Electricity Is FREE

You only have to set your way of thinking and a little dedication and you will succeed and follow the plans exactly the way Bret explains and you will benefit from the savings for years without lifting a finger. You only have to program some minor maintenance on the diy homemade wind generator that only takes half a day every 3 months.

how to build - DIY Homemade Wind Generator.

You are probably trying to decide if you can learn how to build a diy homemade wind generator yourself - so you want to know...

- # How much will a diy homemade wind generator cost to build?
- # Can I get reliable, easy to follow diy homemade wind generator plans?
- # How long will it take to build a diy home made wind generator?
- # Home Made wind generator comparable to commercial models?
- # Parts to build a diy home made wind generator easy to find?

Yes! - You can build a diy homemade wind generator for under \$130 in about 2 weekends by following the plans.

In fact Bret's so confident the project in renewable energy power system is proven to be the fastest way for any family to get started reducing their power bills and Bret offers a 100% money back guarantee. You will have the confidence and knowledge to build your own diy homemade wind generator.

The plans are easy to read and follow and you can produce over 1000 watts of power for under \$130 USD. Made from readily available material, easy to build and assemble and tough enough to endure a tough climate anywhere in the world.

Enjoy Free Solar "green" Electricity For Life.

Bret has saved enormous amount of money that he has paid out many of my creditors and now in a very comfortable financial position to consider early retirement.

You will be amazed at the details describing the build procedure.

Manuals from <http://www.make-a-solar-panel.com> have a wealth of information, all kinds of technical

stuff, and info on how to make solar panels, diy homemade wind generator, charge controllers, storage batteries, small solar panel wiring diagrams and information you'll need to build a complete home energy system and how to connect the power system to your home.

Bret's experience with renewable energy and different designed diy home made wind generators has kept the build plans as simple and easy to follow and are the very best available on the 'net' with cost and ease of assembly, you do NOT have to be very mechanically inclined to follow the plans.
