Remote Phone Answering - Call Somone's Phone and Force it to Answer In Speakerphone Mode

This is a great way to check up on a loved one to make sure they are ok, You can call their phone and force it to answer in speakerphone mode and talk with them without the receiver of the call having to lift a finger.

This is a great way to check up on a loved one to make sure they are ok, You can call their phone and force it to answer in speakerphone mode and talk with them without the receiver of the call having to lift a finger.

Have you ever wanted to be able to talk with a loved one but they just would not answer their phone? With this phone you can call them and enter a code and the phone will automatically go into speakerphone mode. Then you can talk with them or listen in through the speakerphone.

This is also a great way to call your own home and listen to what is going on in the house when you are away.

What a great safety and security feature !

Plus, this system is also a great No Monthly Fee Medical Alert System with tons of features.

NEW - 2 Waterproof Wrist or Necklace Pendant Medical Alert System with No Monthly Fee Ever !

This combination Amplified big button phone with Caller ID, Speakerphone and Emergency connect unit provides peace of mind for those who live alone and and their families. Includes 2 Waterproof wrist-watch style/necklace remote pendants.

Includes 2 Waterproof wrist-watch style or necklace remote transmitter pendants.

This system has an amazing list of features:

The bonus of an amplified phone with addition of the emergency connect feature. The Amplified Emergency Medical Connect Phone acts as an automatic dialer in emergency situations. It comes with 2 small transmitter remote that can be worn on wrist like a watch, or attached to a lanyard around the neck (included).

In the event of an emergency, the wearer presses the red emergency button on the transmitter. There is also an emergency button on the phone. Once the emergency button is pressed, the phone numbers of up to six preprogrammed emergency contacts are dialed. These are normally family members, friends or neighbors who would be able to respond to the emergency call. If there is no response after 30 seconds or the line is busy, the phone automatically dials the next preprogrammed phone number. It will cycle through the emergency numbers twice. When the phone reaches a live person, it will play your pre-recorded emergency message. The other person will dial a number (0-9) to confirm that the emergency message has been received and to deactivate the system from dialing the next emergency contact number. The system then turns on its speakerphone so that the other person is able to speak and listen to the other user, known as Remote Audio Monitoring.

This system also has a remote call feature that allows a caller to call the phone and after 10 rings enters a user password that will remotely answer the phone in 2 way speakerphone mode. This would allow you to call and check up on someone and speak to them through the speakerphone without them having to touch the phone. This is a great way to call someone and make sure they were ok without the person you were calling having to do anything to answer the phone, totally hands free.
