

No Kidney Stones and No Pain

New device for Kidney Care dissolves kidney stones without affecting the organ and and without pain. It prevents the need for potentially harmful medication and future operations

Aug. 17, 2009 - [PRLog](#) -- Dr Allen's Device for Kidney Care targets the cause of the kidney disorder.

The cause of the growth of kidney stones was unknown until Dr Allen created a Theory of Origin of Health Disorders, which explains that:

- > Renal tubular acidosis and surplus of some minerals in blood are the initial triggers in developing kidneys stones.
- > Some of the crystals start to aggregate during their filtration inside kidney and irritate the surrounding tissue.
- > In order to clean up the crystals, the surrounding tissue reacts by increasing of the number of capillaries in this area and then this enlarges the volume of the tissue here.
- > The kidney has a strong capsule surrounding it; therefore a huge pressure builds up inside the organ. Under this pressure the tissue does not get enough blood and this in turn lowers the temperature in this tissue which worsens the situation because it leads to the expansion of extra capillaries. The crystals are pushed out towards urinary tube and form solid concretion.
- > This pressure upsets the balance and filtration of minerals and leads to the development of kidney stones disease with permanent stone production.

In order to stop the tissue from expanding and thus to remove the pressure inside the kidney, it is essential to calm the capillaries, stopping their growth by normalising the temperature in the damaged area. It will improve the filtration and metabolism of minerals freeing the tissue of the kidney from stones. This is the only harmless way to get rid of kidney stones.

COMPARE THIS WITH THE CURRENT APPROACH TO KIDNEY STONE TREATMENT

1. In Non-invasive Extracorporeal Shock Wave Lithotripsy (ESWL) stones can be shattered into smaller fragments and discharge from the body with urine.

The procedure is painful and has potential side effects such as hypertension (as a result of kidney tissue damage) and diabetes (as a result of pancreas tissue damage). Also, not all types of kidney stones can be treated this way. In addition, stone fragments are occasionally left in the body and additional treatments are needed. ESWL does not stop kidney stones formation in the future.

The main advantage of this treatment is that patients can be treated for kidney stones without surgery.

2. Surgery treatment. Prognoses are very poor: bleeding, infection, and chronic renal failure are common.

What is being offered here?

Dr Allen's Device for Kidney Care is comfortable to wear and will not affect your day-to-day activities and can also be used as a preventive measure. Dr Allen's Devices offer a range of unique benefits to its users, helping to:

- Dissolves Kidney Stones and eases urination, relieves pain without resorting to medication;
- Provide a long-term treatment for the cause of pain and the disorder, not just its symptoms;

- Promote healthy functioning of your kidneys.

“Everyone will sooner or later benefit from this new method of preventing and treating of kidney stones problem,” highlights Dr Allen. “It is an absolutely natural way to help your body to tackle this internal health disorder by targeting not simply the symptoms of it but its actual cause, without causing any adverse side effects.”

Dr Allen explains that the stressed area puffs up, putting the organ under a massive pressure from the swelling of the surrounding tissue, causing pain and stones growth.

“In order to stop the tissue from expanding and thus to help the organ to recover, it is essential to calm down the capillaries. Consequently, the swelling disappears relaxing the organ and relieving the pain, and dissolving the stones.”

The natural thermo-elements are a major component of Dr Allen’s therapeutic Device. By making the body temperature constant locally, Dr Allen’s Device creates an ideal environment for the capillaries to stabilise the body temperature in the tissue of a affected organ and supply it with all necessary nutrients, thereby helping the kidney to recover.

“The device is up to 100% effective because it tackles the cause of the problem” he adds.

Notes to Editors:

Dr Allen’s Devices are available in stock.

Pictures and samples of Dr Allen’s Devices are available upon request.
