

Laser Hair Removal, Pain Free, Long Lasting and Fast

The Belvedere Private Clinics has recently announced the opening of a new Laser and non-surgical cosmetic clinic that will specialise in injectables, dermal fillers and laser treatments such as tattoo removal, skin tightening and hair removal.

Aug. 26, 2009 - [PRLog](#) -- For many people unwanted hair is an inconvenience and for others it is a major issue that damages their self-confidence and day-to-day life. Excessive or unsightly hair can affect people in many ways; it can have implications on the clothes you feel you can or can't wear, can affect an individual's sex life, their self-confidence and avoidance of certain social situations.

For those with a minor issue, hair removal techniques such as electrolysis have long been considered a lengthy process, at a high cost, for a result that wasn't all that necessary in the first place. However for those with a more serious issue, hair removal is viewed as having much greater benefits although the time and money spent on the process can put many people off and so they do not go ahead with treatment.

Laser Hair Removal at The Belvedere Clinic offers a more effective, quicker and relatively pain free solution to waxing, electrolysis and hair removal creams, with long lasting immediate results. The most common areas for Laser Hair Removal are the face, neck, underarms, bikini line, nipples, arms and legs for women. And for men the back, face, ears, neck and chest are the most common areas.

The Procedure

All treatments are carried out by fully trained cosmetic nurses, skilled in the use of laser hair removal equipment. The procedure is performed by passing the laser over the desired area, where the hairs are destroyed at the follicle to ensure a reduction in further growth and smooth feeling skin. It is often necessary to have a course of treatments to achieve the desired results and the number of treatments depends on the area being treated as all treatments are specifically tailored to your individual needs.

Recovery

In most cases recovery is immediate and results from Laser Hair Removal is accumulative so the more treatments on any designated area the longer the results will last before the next treatment is needed. The only real direction for anyone who has received Laser Hair Removal treatment is to avoid direct exposure to the sun, saunas and heat treatments for between 24-36 hours following the procedure.
