

Google optimized for Java programmers

Java programmers can now restrict their search to java related websites and refine the results for tutorials, documentation, source code, forums, etc.

Oct. 9, 2009 - [PRLog](#) -- Nasik, Oct. 9: Dreamwares has launched a Google custom search engine (CSE) for Java programmers at www.cselove.com/java. It leverages the power of Google CSE for the benefit of Java programmers by searching only Java related websites. The results are not only context sensitive, but they are also sorted under different categories like tutorials and documentation, source code, forums, etc.

Even if users append the terms like “source code” to their search query in Google, still the results are not just source codes since most java related websites will have such keywords on their pages. In Cselove.com, different sections of the websites have been sorted under different categories by human. So the filtering is much more reliable and available with just a click. Also, other Java specific search engines search only for code snippets. However, the solution to the programmer’s problem may be present in some forum or tutorial. Cselove.com provides all kinds of results.

About Dreamwares

Dreamwares is a new company formed by Abhishek Agrawal and Nishant Bamb to experiment with innovative software and webware ideas. It is located in India. Their other ongoing experiments include OTalkie, with which users can send and receive Orkut scraps instantly. More details about it can be found on www.otalkie.com.
