What Is Endoscopic Sinus Surgery ?

Endoscopic sinus surgery - also called endoscopy or sinuscopy - is a procedure used to remove blockages in the sinuses (the spaces filled with air in some of the bones of the skull). These blockages cause sinusitis, a condition in which the sinuses swell and become clogged, causing pain and impaired breathing.

The procedure can : -

- * Relieve nasal blockages
- * Relieve facial pain
- * Improve breathing
- * Improve the sense of smell and taste..

Facts about endoscopic sinus surgery : -

- * 80% to 90% of people report a considerable reduction in symptoms after endoscopic sinus surgery.
- * Endoscopic sinus surgery was introduced in the 1960s but did not become widely used in the U.S. until the 1980s....

What Conditions Are Treated With This Surgery ?

Endoscopic sinus surgery is used to treat : -

- * Sinusitis
- * Deviated septum
- * Polyps...

Sinusitis : -

Sinusitis is a common condition that usually is easy to treat with medication. It feels much like a head cold, with a blocked, stuffy, or runny nose....

Sinusitis can be the result of : -

- * A cold that lingers
- * A bacterial or viral infection
- * Swelling due to allergies...

Polyyps : -

A polyp, also called a cyst, is a benign (noncancerous) water-filled swelling about the size of a grape, which develops in the sinuses and causes blockage. They most frequently occur in people who have asthma. Polyyps can sometimes be reduced in size with medication...

Tumors : -

A tumor is a swelling caused by an uncontrolled growth of cells that creates new tissue. It is not water-filled like a polyp. A tumor can be noncancerous or cancerous. Tumors in the sinuses are quite uncommon but can sometimes be removed with endoscopic sinus surgery. However, more extensive surgery is often necessary. ...

There are four main pairs of sinus openings, sometimes called sinus cavities, in the face : -

- * Maxillary - in the cheekbones [Read More..](#)
- * Ethmoid - between the eye sockets
- * Frontal - in the forehead and above the eyebrows
- * Sphenoid - deep in the head at the back of the nose...

What Causes Sinusitis ?

The potential causes of sinusitis include : -

- * Virus
- * Bacteria
- * Fungus
- * Allergies
- * Asthma...

There are two types of sinusitis : -

* Acute sinusitis means that the symptoms of the condition are temporary, usually lasting no more than 30 days. However, the symptoms of acute sinusitis are more severe and painful than the symptoms of chronic sinusitis.

- * Chronic sinusitis means that the symptoms of sinusitis occur frequently or for long periods of time....

Symptoms of sinusitis vary from person to person. The most common symptoms are : -

- * Stuffy or runny nose
- * Clear, thin discharge from the nose (as in chronic sinusitis), or thick yellow or green discharge from the nose, sometimes tinged with blood (as in acute sinusitis)
- * Sneezing and/or coughing...

Nice To Know

Return to the doctor right away if any of the following symptoms appear after surgery : -

- * Swelling
- * Excessive bleeding
- * Facial bruising or black eyes
- * Excessive discharge from nose or into throat, especially yellow or green discharge...
