

New FlexiSPY BlackBerry Spy Software Makes People Smarter

By Flexispy Ltd

Dated: Nov 02, 2009

New spyphone software converts BlackBerry smartphones into spy phones with an incredible array of features. Call intercept (phone tap) has been added to 'spy call' microphone remote control, GPS, SMS, email, and call log capture and archiving.

Keeping track of at-risk youths and wayward spouses, or investigating insider threats from employees has never been easier. FlexiSPY Ltd. now includes 'industry-first' call intercept - phone tap capability to their popular spy phone software package for BlackBerry smartphones. FlexiSPY BlackBerry PRO-X allows users to secretly monitor mobile phone communications with easy web-based access to information. The spyphone software can be purchased online, downloaded, and installed directly on BlackBerrys in a matter of minutes. It is supported by complete customer service and a 10-day unconditional 100% money back guarantee.

If you need to capture emails sent by BlackBerry, then you need FlexiSPY PRO-X. It does what no other mobile spy software can. It automatically records all incoming and outgoing emails, SMS messages, call logs and tracks the device location. It then uploads these logs via GPRS or WiFi connection to a remote hosted server. To gain access to phone activity, registered users simply log onto their account from any internet connection, including other smartphones. GPS location displays on a map with options for real-time tracking or position history. The spyphone software works on both GSM and CDMA networks, however CDMA does not support voice call interception.

FlexiSPY PRO-X exclusive features include real-time voice call intercept and remote control to secretly turn on the phone microphone and listen to surroundings. Captured information even includes the name of the people from the phone's contact address book. The cell phone spy software includes numerous data control and scheduling functions, accurate call duration, and email relaying to forward copies of target emails to selected email accounts.

FlexiSPY is high quality spy software, and it is available to purchase online and downloads directly to smartphones. More information can be found at http://www.flexispy.com/spyphone_call_interceptor_gps_tracker_blackberry.htm
