Now shooting download your images to a PC, editing the images, e-mailing and printing is simple with the CANON EOS 1000D 18-55 Digital SLR Camera.

Now at : £374.99

The EOS 1000D from Canon is an entry level DSLR that lies beneath the 450D in Canons EOS model line-up. Aimed at photography enthusiasts who wish to take their hobby to the next level, the Canon 1000D is a 10 mega pixel camera with a CMOS sensor, 7-point wide AF system and up to 3fps continuous shooting.

Camera Features:

Feature - Benefit

Color - BLACK

Manufacturer Warranty - 1 Years Cover included

2.6 inches LCD screen - For composition and color viewing of your shots.

DIGIC 111 processor .

Full manual controls - This means that you can choose exactly how much exposure you want, as well as aperture and shutter. This may result in poor quality images for amateur phographers however, so use with caution.

All-metal body The camera has a metal body and is weather-proof.

Optical viewfinder - Allows composition without the need for the LCD screen, so saving battery power.

Rechargeable lithium-ion battery and charger - Rechargeable, compact sized battery with no memory effect so they can be recharged at any time. Charger also supplied.

500 shots per charge The average number of pictures which can be taken with the cameras battery life.

Auto & 100-1600 ISO rating - This number indicate the cameras sensitivity to light. The higher the sensitivity the less light is needed to make an exposure.

12 shooting modes - The amount of scene modes that can be selected e.g. portrait , landscape, etc.

30-1/4000 seconds shutter speed range (secs) - Available shutter speeds.

SD/SDHC memory card slot - Principal card format of the camera

22.2x148 mm CMOS image sensor - This is very important in determining the quality of the photograph. The larger the sensor, the better.

7 point auto focus - The higher the number, the greater the accuracy of the auto focus mechanism.

Auto focus lock - This allows you to set-up the focus automatically, but then locks it in place so that it retains the same focus even if you move the camera.

Manual exposure control - Allows manual override of the cameras automatic exposure system. Especially useful in tricky lighting situations.

Shutter-priority mode This is a semi-manual mode that gives priority to the shutter speed you choose. The camera then selects the right aperture to ensure enough light to expose the image.

Aperture-priority mode - To override the camcorders automatic focus, thus narrowing or widening the cameras depth-of-field.

Also takes black-and-white images - This lets you take pictures in black and white if you so wish.

3.5-5.6 maximum aperture This determines the depth of focus. The higher the f-stop, the farther the field of focus. If you go for a lower f-stop ie with a narrower aperture, only closer subjects will be in focus.

Time and date stamp This ensures you can catalogue when your images were taken.

AV out connection - Audio Visual connection.

Video out connection - Allows you to connect your camera to your TV.

Downloading and editing software included Both editing and download software is supplied with this camera

PC download software included - Download your images to a PC to edit, e-mail or print.

Automatic ISO - Automatically adjusts the ISO for each shot.

USB cable supplied - Faster downloading when connected to a USB port on your PC.

Manual focus - For full focusing control.

18-55 mm focal length (35mm equiv.) This describes the variable length of the lens. The shorter the lower limit, the wider the angle, which means you get a greater field of vision. The longer the upper limit, the greater the telephoto zoom lens is, which means that you can zoom further.

3 flash modes - Allows the flash to be switched off, or forced in various situations to give the desired creative result.

Continuous shooting - The camera will continue to take photographs whilst the shutter button is depressed. Ideal for capturing sports events.

3 exposure metering modes - Metering is the cameras way of deciding how much light to use. It does this by measuring the distance to the subject.

EF-S lens The lens is the eye of the camera so the better the lens the better the quality of the image.

Red-eye reduction - Reduces the possibility of red eyes by sending out a flash, or beam of light to reduce the pupil size before the main flash fires.

Playback zoom Allows area of the picture to be enlarged during playback.

0.28 m minimum focusing distance - For close-up photography. In some instances, a Macro mode may need to be switched on to achieve this distance.

Automatic flash Fires automatically when the light is low.

White balance adjustment - Ensures that whites are correctly reproduced in tricky lighting situations.

Self-timer - Allows you to get into your own photos.
