

Don't Be Another Statistic!

Ever dreamed of opening your gate, garages, shutters, barriers with your phone? You can now do it with the WT 009 GSM GATE OPENER!

Feb. 1, 2010 - [PRLog](#) -- Let your Mobile Phone be your Universal Remote Control. Forget the conventional remote control, you can now open your gate, door, garage, shutters and Garage Doors with your Mobile Phone. Just 'speed-dial' a secure telephone number which identifies you as an Authorised User and the gate, door, garage, shutters and Garage Door are opened. There are no call costs to use the as all incoming calls are rejected once authorised.

No more hanging about for people to arrive to open your gate as the WT - 009 will allow you to open your door, garage, shutters or Doors from anywhere in the World.

Domestic gates, doors, garages, shutters, communities, business, clubs, public car parks, hospitals, hotels, factories, villas... can all benefit from this system. GSM Mobile gate, door, garage, shutter Opener can also be used as a long distance remote control.

Save money on providing everybody with a remote control, let them use their mobile phone. Everybody has a mobile phone, let it be a universal remote control!

The GSM Gate Opener incorporates a professional industrial grade GSM engine that receives calls at its SIM number, as any other ordinary GSM phone. The system operates in the GSM module quad band 850/900/1800 / 1900 MHZ. Just to give an example, if your SIM has a phone number 9228 9810, that is the number you have to call to open the gate.

The system has a memory where the designated numbers are stored with a maximum of up to 99 numbers. When the Gate Opener receives a call, it will check the calling number and validate it with the listed numbers. If the number is in the list then it will reject the call and open the gate. The system does not answer the call, it simply checks the caller ID. Your network must send the caller ID otherwise the Gate Opener will not work. Usually operators don't charge until you answer the call, so it won't cost you anything to open the gate with the Gate Opener. Of course, an active SIM is needed for this to be possible. To store a number, you simply send an SMS, that starts with a password to the GSM Gate Opener, indicating the phone number to enable its position in the list. Numbers are stored in the system's memory and not on the SIM. This prevents someone from removing the SIM to copy all the numbers into a mobile

phone. Only the one who knows the password can insert or delete enabled phone numbers.

The GSM Gate Opener doesn't have limitations like a normal remote control. Using a mobile phone you can open from very far away, even from another city! (International Roaming Required).It is really convenient to arrive in front of your house when the gate is already open, without having to wait in the middle of the road.

All electric gates have a button that is used to open them. The Gate Opener has a relay whose contact has to be connected to the opening button. Actually it pushes the button in your place. The GSM Gate opener accepts up to 99 phone numbers under it's White List. Every auto gate will have a motherboard. Customers would required the WT 009 supply complete with the auto gate control board and power adapter connects to the power sources.

Crimes such as kidnappings, vehicle theft, and armed robberies, occur while you wait for your automatic gate to open. So why be a VICTIM? And if you are one, then learn from your mistakes! ACT NOW and save yourself the agony. Prevention is always better than cure.

Our marketing and sales staffs, together with our research and production teams, both in China and Malaysia, are committed to providing outstanding products and services to support customers in applying new materials and technologies such as these.”

Read more about us and discover the amazing array of our products. For more information please visit us at www.witura.com

Those interested in contacting with the Witura and want to know more information about the GSM Alarm Backup Dialer can also email to sales@witura.com

Established in 2003, Witura Corporation is recognized as the private limited company involved in design, manufacturing and supply of GSM Terminal and GSM GPRS modem for security burglar alarm industry, We design GSM Intercom and 3G camera for access control, gate automation and CCTV market and producing GSM controller for remote telemetry, remote monitoring & remote control system and data logger. We also involved in telecom industry to supply of GSM gateways for call termination and fixed cellular terminal (FWT) & fixed wireless phone (FWP) for wireless local loop (WLL) market
