

Door Brace : Introducing The Live Saving OnGARD Security Door Brace. Defends Against Door Kickins

One of the most affordable and effective home devices is the patented OnGARD Door Brace. This state-of-the-art door brace is constructed of a space-age polymer, the same material found in US fighter planes and transportation bridges worldwide.

June 17, 2010 - [PRLog](#) -- Nothing is frightening and potentially deadly as a home invasion or burglary. Though the FBI and local law enforcement do not track this daily threat to lives and property, news headlines tell the real story—home invasions are now, sadly, part of our existence. Because home invaders have no regard for human life, injuring or murdering a family is simply a means to an evil end—stealing valuables and cash.

Homeowners like to think that home invasions and burglaries happen to other families. But as the Founder and CEO of GSE, Inc., I am here to tell you that criminals don't discriminate. Black, white, poor or rich, your family could be the next target of a home invader or burglar.

Take a look at some of today's disturbing statistics as they relate to home invasions and burglaries:

- A burglary occurs every 15 seconds in the United States
- 1 in 5 homes experiences a break-in or violent home invasion
- Approximately 80% of break-ins occur forcibly through a "locked" door.

You can't eliminate the possibility of a home invasion. However, you can reduce the likelihood of becoming a target by following my simple suggestions. Remember: what's most important is introducing layers of protection to your home, hence making it difficult for the intruder to enter your dwelling.

As you can see from the frightening statistics, burglaries and violent home invasions are clearly on the rise in America. With that said, most families make the dreaded mistake of relying on locked doors or an alarm system as their sole barrier between them and the bad guys. Don't make that mistake! Instead, add layers of such as high quality dead bolts, door braces, and glass protection film to make it extremely difficult for an intruder to enter your home.

One of the most affordable and effective home devices is the patented OnGARD Door Brace. This state-of-the-art door brace is constructed of a space-age polymer, the same material found in US fighter planes and transportation bridges worldwide. The OnGARD door brace is incredibly strong and resists:

- Blows and thrusts from a sledgehammer
- Body and shoulder slams
- Multiple forceful kicks by a 250-pound man.

<http://www.youtube.com/watch?v=Kfye2SnhkK0>

A relatively small, unobtrusive, two-piece device installed at the bottom of the door, the door brace works

by combining the strength of the OnGARD, the existing door frame and the actual door, which enables the door to withstand the most violent of blows. While a criminal may repeatedly kick the door, he will typically abandon the attempted break-in knowing that the attention- getting noise will draw unwanted attention by neighbors and passersby.
