

## **"My Feet Hurt" Rinox Pavers provides innovative solutions to concrete pavers surrounding pools**

*Rinox Pavers, manufacturer of interlocking concrete paving stones and modular block retaining walls, launches new product to provide a cooler slip resistant surface surrounding pools.*

**Aug. 30, 2010** - [PRLog](#) -- "My Feet Hurt"

How many times have you heard your family and friends complain about bare feet on the hot surfaces surrounding pools? I know I have. Children seem to be the most vocal about the discomfort but even the toughest adults do the "hot foot tip-toe dance" (this dance reminds me of John Candy in "Summer Rental" carrying the cooler across the hot sand). The issue is normally resolved by splashing pool water on the surface, running fast into the pool, or watering the area down with a garden hose. These are all temporary fixes and it often minimizes the entertaining area that is hot until the sun changes position.

Here at Rinox, we have identified the issues and invested into the research and development of our new product line and colors. We designed a beautiful, large stone patio system, named Arizona, which is specifically engineered and manufactured to optimize your pool and backyard landscape experience. This product gives your patio and pool deck an uncompromised distinction of class and beauty with four different-sized stones all with their own unique stone texture. The stone surface and edges of the Arizona patio pavers are designed with a smooth, subtle transition making them pleasant to walk on while maintaining the elegance of natural stone. The secret to the colors available in the Arizona patio paver are the proprietary blend of raw materials and the manufacturing processes. Two colors specifically have been tested for their SRI (Solar Reflectivity Index) value and have been proven to be up to three times cooler than competitive surfaces. This is not only cooler on the feet but it is also more environmentally friendly. Projects using materials with higher SRI values help minimize the Heat Island Effect.

The Arizona patio pavers are also slip resistant and will maintain a safer surface as people to enjoy the pool. Alternate surfaces comprised of polished natural stone or common clay bricks can become slippery when water is applied causing a greater concern for safety.

To learn more about the benefits of the Arizona patio paver by Rinox, please log on to <http://www.rinoxpavers.com>. From there you will be able to locate a Rinox authorized hardscape dealer and research products including interlocking concrete paving stones, patio pavers, retaining walls and a collection of distinctive hardscape and masonry products. Rinox manufactures their concrete products in Douglassville, PA, and supplies local authorized distributors throughout Pennsylvania, New Jersey, New York, Delaware, Maryland, and Virginia.
