

## Got Tap and Die? Newer Tap and Die Sets Feature Better Quality Steel

*Newer tap and die sets are made with a higher quality steel compared to many years ago, making modern versions more accurate and useful. Triumph tools is one manufacturer of these higher quality sets, now available from Carbide Processors.*

**Feb. 16, 2011** - [PRLog](#) -- Modern day tap and die sets are now made with higher quality steel which makes the tap and dies more accurate and easier to use with better edges and better grinding. Newer sets are also useful in more applications than they have been in the past.

Tap and die sets are cutting tools that are used in threading to cut metal. The taps are used to tap a hole by twisting the threads to form a hole. Dies, hexagonal in shape, fit into a holder (Die Stock) where you then turn them to cut the thread.

These sets can be used for various things. They are mostly used for metal-working; however, special ones can be used for woodworking. They are commonly used for making bolts which can become of use, for instance, if you are remodeling a car and are having a difficult time finding the exact bolt that you need in order to do the job. They are also often used for jobs that require a lot of repairing.

You quite often will find that you need a tap and die set because it is a great set to have in the event of an emergency. If you find yourself stuck in the middle of nowhere, these sets can actually become quite useful because you can use them for a large number of things that involve fixing anything with threads.

You will need a separate die and tap for each rod that you plan on doing. For this reason, they are often purchased in sets. Sets come in different sizes and variations; you can find 18 piece sets to 38 piece sets and more. The thread classification varies in accordance to what you are using it for. The better quality tap and die sets are the ones made from better quality steel.

Triumph is a great example of a company who manufactures tap and die sets. These sets come in various sizes, for instance the 38 piece tap and die set from Triumph which includes an assortment of taps, dies and accessories. This Tap and Die set, along with many others, can be found on Carbide Processors' website which recently added a selection of tap and die sets and drill bit sets from the Triumph line, as they continue to add more product lines from Triumph in the near future.

For more information on Triumph Tap and Die sets, other tools for woodworking needs, and how you can save money on the best tools for your needs visit [www.carbideprocessors.com](http://www.carbideprocessors.com).

###

We have been in the tool business for 30 years and offers exceptional tools for the toughest applications. We Carbide offer a variation of woodworking tools and also specializes in custom tooling, brazing carbide and machine coolant filtration systems.
