

Firestone Winterforce Winter Tires - Snow Tires

Information on the Firestone Winterforce tires. Where to purchase Firestone Winterforce snow tires.

Sept. 25, 2009 - [PRLog](#) -- Winterforce Studdable Winter radials are designed to deliver outstanding value at an affordable price for the owners of domestic and imported sedans, vans and light-duty pickup trucks, as well as crossover and sport utility vehicles.

Regardless of the name branded on their sidewalls, Winterforce (non-branded), Firestone Winterforce and Firestone Winterforce UV (as in Utility Vehicle) radials feature the same tread design, compound and new tire tread depth, as well as feature the same physical dimensions and internal construction on a size-by-size basis. That makes them fully compatible and allows them to be mixed and matched as necessary.

NOTE: Installing less than a set of new tires on four-wheel or all-wheel drive vehicles may require that new tire(s) be shaved to the same tread depth as existing tires to minimize driveline wear and/or damage.

Winterforce winter radials feature an aggressive directional tread pattern with tread blocks that are siped, stepped and/or can be studded to offer the biting edges necessary to provide traction in snow and on ice. Independent tread blocks feature high-density siping to enhance grip in loose snow while the intermediate and shoulder tread blocks are molded to accept studs that further enhance traction on hard-packed snow and ice. The tire's internal structure includes twin steel belts on top of a polyester carcass to combine strength with ride quality.

All Winterforce winter radials meet the industry's severe snow service requirements and are branded with the mountain/snowflake symbol.
